

¹¹⁶Cd(⁴⁸Ca,5n γ):tsd 2009OI09

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	C. W. Reich	NDS 113,157 (2012)	31-Dec-2010

Additional information 1.

¹¹⁶Cd(⁴⁸Ca,5n γ), fusion-evaporation reaction, E(⁴⁸Ca)=215 MeV. two self-supporting enriched ¹¹⁶Cd targets, total thickness=1.3 mg/cm². Measured E γ , I γ , $\gamma\gamma$ using the GAMMASPHERE array of 101 HPGe detectors at the ATLAS facility. Only data presented are in the form of a spectrum of γ -peaks labeled according to the E γ values. Report a triaxial SD band with high spins. Present potential-energy-surface diagrams and comparison with configuration-dependent cranked Nilsson-Strutinsky calculations. Others: 2009Ri05 (a conference proceedings report by many of the authors of 2009OI09) present preliminary data on the tsd band. 2008SiZW (one of the authors of 2009OI09) mentions this experiment but provides no data. This information is to be regarded as being superseded by the present publication (2009OI09). 2008Ma43 present the results of configuration-dependent cranked Nilsson-Strutinsky calculations of ultra-high spin structures in ¹⁵⁷Er, ¹⁵⁸Er and ¹⁵⁹Er.

¹⁵⁹Er Levels

Percent population of this band, relative to that of the 5n channel, is 0.01.

E(level) [†]	J π [‡]	Comments
x [#]	J	J π : J \approx 57/2.
911+x [#]	J+2	
1859+x [#]	J+4	
2849+x [#]	J+6	
3883+x [#]	J+8	
4957+x [#]	J+10	
6071+x [#]	J+12	
7222+x [#]	J+14	
8436+x [#]	J+16	
9706+x [#]	J+18	
11047+x [#]	J+20	

[†] Values deduced from the listed E γ values, assuming that the γ energies increase as the excitation energy increases.

[‡] Based on that (J) of the lowest observed level, assuming that the connecting γ 's are all stretched E2's. From the results of their calculations, 2009OI09 state that the J value of the highest-energy state is \approx 97/2, leading to J π \approx 57/2 for the lowest state.

[#] Band(A): Triaxial SD band Suggested conf is (relative to the ¹⁴⁶Gd core) $\pi[(h_{11/2})^6(h_{9/2}f_{7/2})^4(i_{13/2})^1] \otimes \nu[(N=4)^{-2}(h_{11/2})^{-2}(i_{13/2})^5]$, with the estimated deformation parameters $\epsilon_2 \approx 0.37$ and $\gamma \approx +20^\circ$.

γ (¹⁵⁹Er)

The γ 's are assumed to be stretched E2's.

E γ [†]	E _i (level)	J π _i	E _f	J π _f
911	911+x	J+2	x	J
948	1859+x	J+4	911+x	J+2
990	2849+x	J+6	1859+x	J+4
1034	3883+x	J+8	2849+x	J+6
1074	4957+x	J+10	3883+x	J+8
1114	6071+x	J+12	4957+x	J+10
