

**Adopted Levels, Gammas**

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	C. W. Reich	NDS 113, 157 (2012)	31-Dec-2010

Q( $\beta^-$ )=970.9 8; S(n)=5943.21 8; S(p)=8595 10; Q( $\alpha$ )=-795.5 9 [2017Wa10](#)  
 S(2n)=13880.60 8; S(2p)=16462 10 [2017Wa10](#)

[Additional information 1.](#)  
[Additional information 2.](#)

Model calculations of interest include  $\mu$  ([1974Ba18](#)), configurations ([1973Ga29,1983So01](#)), and  $\Delta N=2$  mixing ([1971Ka06](#)).

[2004Gr26](#), as part of the interpretation of their data, present the results of calculations based on the quasiparticle-phonon and quasiparticle-rotor models.

The band and configuration assignments depend in large measure on the agreement between the measured (d,p) and (d,t) cross sections ("fingerprint") with theoretical expectations for the various Nilsson orbitals, as well as the usual energy spacings within rotational bands. The relative population of a given state in (d,p) and (d,t) frequently makes it possible to distinguish between particle and hole states.

[2004Gr26](#) propose (tentative) configurations for several states. These are pointed out in the various source data sets but are not given here.

<sup>159</sup>Gd Levels

[1965Gr27](#) report a level with a half-life of 0.46 ms and decaying with a 170-keV M2  $\gamma$  ray. This level has not been verified and is not included here.

<sup>†</sup> Values generally are those recommended by 2004Gr26, as listed in their tabular level scheme (their Table iv).

<sup>‡</sup> Band(A): K<sup>π</sup>=3/2<sup>-</sup>, ν3/2[521] band. α=10.15 keV, β=-0.12 eV, A<sub>3</sub>=-3.2 eV, from the 3/2<sup>-</sup> through 9/2<sup>-</sup> level energies.

**Adopted Levels, Gammas (continued)**

<sup>159</sup>Gd Levels (continued)

- # Band(B):  $K^\pi=5/2^+$  band.  $\alpha=7.3$  keV, from the  $5/2^+$ ,  $7/2^+$  level energies. Significant band staggering is observed. Dominant conf is  $\nu 5/2[642]$ , with significant amounts of  $\nu 3/2[651]$  and  $\nu 7/2[633]$  from the expected strong Coriolis mixing.
- @ Band(C):  $K^\pi=5/2^-$ ,  $\nu 5/2[523]$  band.  $\alpha=11.69$  keV,  $\beta=-8.3$  eV, from the  $5/2^-$  through  $9/2^-$  level energies. Calculations of [2004Gr26](#) suggest a contribution from  $\nu 5/2[512]$ , as well.
- & Band(D):  $K^\pi=1/2^-$ ,  $\nu 1/2[521]$  band.  $\alpha=11.50$  keV,  $\beta=-7.4$  eV,  $a=+0.47$ , from the  $1/2^-$  through  $7/2^-$  level energies. Calculations of [1973Ga29](#) indicate that the K-2  $\gamma$  vibrations built on  $\nu 5/2[523]$  and  $\nu 3/2[521]$  are also components of this band.
- a Band(E):  $K^\pi=11/2^-$ ,  $\nu 11/2[505]$  bandhead.
- b Band(F):  $K^\pi=3/2^+$ ,  $\nu 3/2[402]$  band.  $\alpha=11.45$ ,  $\beta=-29$  eV, from the  $3/2^+$  through  $7/2^+$  level energies. Calculations of [1973Ga29](#) suggest that the K-2  $\gamma$  vibration built on  $\nu 1/2[400]$  is a significant component in the makeup of this band.
- c Band(G):  $K^\pi=1/2^+$ ,  $\nu 1/2[660]$  band.  $\alpha=8.86$  keV,  $a=+1.9$ , from the  $1/2^+$  through  $5/2^+$  level energies. This is the dominant conf, with admixtures of other  $i_{13/2}$ -based orbitals having  $K^\pi$  values close to  $1/2^+$ , due to the expected strong Coriolis coupling.
- d Band(H):  $K^\pi=5/2^-$ ,  $\nu 5/2[512]$  band.  $\alpha=11.02$  keV,  $\beta=-17.3$  eV from the  $5/2^-$  through  $9/2^-$  level energies. Calculations of [2004Gr26](#) suggest a contribution from  $\nu 5/2[523]$ , as well.
- e Band(I):  $K^\pi=3/2^+$ ,  $\nu 3/2[651]$  band.  $\alpha=8.93$  keV,  $\beta=+8.3$  eV. This is the dominant conf, with admixtures of other  $i_{13/2}$ -based orbitals having  $K^\pi$  values close to  $3/2^+$ , due to the expected strong Coriolis coupling.
- f Band(J):  $K^\pi=3/2^-$ ,  $\nu 3/2[532]$  band.  $\alpha=13.12$  keV,  $\beta=-93.2$  eV,  $A_3=+0.21$  keV from the  $3/2^-$  through  $9/2^-$  level energies. Note that the large B and  $A_3$  values indicate that the rotational-energy expression does not describe well the energy spacings within this band. This is the dominant conf, with significant contributions from the  $K^\pi=0^-$  octupole vibration built on  $\nu 3/2[402]$  and from  $\nu 1/2[530]$ , due to expected Coriolis mixing with  $\nu 3/2[532]$  (from [2004Gr26](#)).
- g Band(K):  $K^\pi=1/2^-$ ,  $\nu 1/2[530]$  band.  $\alpha=9.60$  keV,  $\beta=+0.26$  keV,  $a=-0.91$ , from the  $1/2^-$  through  $7/2^-$  level energies. (See also the comments on the  $\nu 3/2[532]$  band). This is the dominant conf, with contributions from the  $K^\pi=0^-$  octupole vibration built on  $\nu 1/2[400]$  and from  $\nu 3/2[532]$ , due to the expected strong Coriolis mixing with  $\nu 1/2[530]$  (from [2004Gr26](#)).
- h Band(L):  $K^\pi=1/2^+$ ,  $\nu 1/2[400]$  band.  $\alpha=10.53$  keV,  $\beta=-22$  eV,  $a=-0.13$ , from the  $1/2^+$  through  $7/2^+$  level energies. This is the dominant conf, with an admixture of the K-2  $\gamma$  vibration built on  $\nu 3/2[402]$ .
- i Band(M): proposed  $\nu 7/2[633]$  band.  $a\approx 14$  keV, from the  $7/2^+$  and  $13/2^+$  level energies.
- j Band(N):  $K^\pi=1/2^+$ ,  $\nu 1/2[651]$  band.  $\alpha=11.81$  keV,  $a=-0.44$ , from the  $1/2^+$  through  $5/2^+$  level energies.
- k Band(O):  $K^\pi=1/2^-$ ,  $\nu 1/2[510]$  band.  $\alpha=12.97$  keV,  $a=-0.39$ , from the  $1/2^-$  through  $5/2^-$  level energies. Note that these parameters do not give an accurate value for the  $7/2^-$  level energy, if the value for this energy is that proposed by [2004Gr26](#). This is the dominant conf, with significant contributions from the  $K^\pi=2^-$  and  $3^-$  octupole vibrations built on  $\nu 5/2^+[642]$  and the K-2  $\gamma$  vibration built on  $\nu 5/2[512]$ .
- l Band(P):  $K^\pi=3/2^-$ ,  $\nu 3/2[512]$  band.  $\alpha=14.3$  keV, from the  $3/2^-$  and  $7/2^-$  level energies. A contribution from the K-2  $\gamma$  vibration built on  $\nu 7/2[514]$  is also expected ([2004Gr26](#)).
- m Band(Q):  $K^\pi=7/2^-$ ,  $\nu 7/2[514]$  band.  $\alpha=7.64$  keV. A contribution from  $\nu 7/2[503]$  is expected ([2004Gr26](#)).
