

$^{106}\text{Cd}(^{58}\text{Ni},3\text{p}2\text{n}\gamma)$  2001Ke09

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	C. W. Reich	NDS 113, 157 (2012)	31-Dec-2010

## Additional information 1.

$^{106}\text{Cd}(^{58}\text{Ni},3\text{p}2\text{n}\gamma)$  at  $E(^{58}\text{Ni})=286, 291, 298$  MeV; measured  $E_\gamma$ ,  $I_\gamma$ ,  $\gamma\gamma$  and  $\gamma(\theta)$  using the JUROSPHERE spectrometer comprised of 14 Eurogam escape-suppressed HPGE detectors and 10 TESSA Ge detectors. Reaction products were separated in a gas-filled recoil separator and implanted into a position-sensitive Si-strip detector.  $\alpha$ -decay recoil tagging was used to assign  $\gamma$ 's to specific nuclides.

 $^{159}\text{Ta}$  Levels

E(level) <sup>†</sup>	$J^\pi$ <sup>‡</sup>	$T_{1/2}$	Comments
(0)	$1/2^+$		
64 <sup>#</sup> 5	$11/2^-$	0.56 s 6	E(level): from Adopted Levels. $T_{1/2}$ : from Adopted Levels.
637.7 <sup>#</sup> 1	$(15/2^-)$		
1278.2 <sup>#</sup> 2	$(19/2^-)$		
1911.6 <sup>#</sup> 2	$(23/2^-)$		

<sup>†</sup> The three  $\gamma$ 's are placed on the assumption that the strongest  $\gamma$ 's are lowest in the scheme. The other  $\gamma$ 's are in coincidence with all these three.

<sup>‡</sup> From  $J^\pi=11/2^-$  for the bandhead and the observation that the  $\gamma(\theta)$  data for the intraband transitions are consistent with stretched quadrupole character (assumed to be E2 rather than M2).

<sup>#</sup> Band(A): Level sequence based on  $\pi h_{11/2}$ .

 $\gamma(^{159}\text{Ta})$ 

$E_\gamma$	$I_\gamma$	$E_i(\text{level})$	$J_i^\pi$	$E_f$	$J_f^\pi$	Mult. <sup>†</sup>
<sup>x</sup> 188.3 1	12 2					Q
<sup>x</sup> 232.4 1	40 2					D
<sup>x</sup> 284.2 1	7 2					Q
<sup>x</sup> 368.3 1	24 3					Q
<sup>x</sup> 433.5 2	15 3					Q
573.7 1	100 2	637.7	$(15/2^-)$	64	$11/2^-$	Q
633.4 1	72 6	1911.6	$(23/2^-)$	1278.2	$(19/2^-)$	Q
640.5 1	86 5	1278.2	$(19/2^-)$	637.7	$(15/2^-)$	Q

<sup>†</sup> From  $\gamma(\theta)$  measurements.

<sup>x</sup>  $\gamma$  ray not placed in level scheme.

$^{106}\text{Cd}(^{58}\text{Ni},3\text{p}2\text{n}\gamma)$  2001Ke09

## Level Scheme

Intensities: Relative  $I_\gamma$ 

## Legend

- $\longrightarrow$   $I_\gamma < 2\% \times I_\gamma^{\text{max}}$
- $\longrightarrow$   $I_\gamma < 10\% \times I_\gamma^{\text{max}}$
- $\longrightarrow$   $I_\gamma > 10\% \times I_\gamma^{\text{max}}$
