

$^{118}\text{Sn}(^{162}\text{Dy}, ^{162}\text{Dy}'\gamma)$ **2001Wu05**

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	N. Nica	NDS 195,1 (2024)	19-Sep-2023

Additional information 1.

$^{118}\text{Sn}(^{162}\text{Dy}, ^{162}\text{Dy}')$, $E(^{162}\text{Dy})=780$ MeV. Enriched (99.975% ^{118}Sn) target, ≈ 250 $\mu\text{g}/\text{cm}^2$ thick, evaporated onto an ≈ 20 $\mu\text{g}/\text{cm}^2$ carbon foil and covered by an ≈ 6 $\mu\text{g}/\text{cm}^2$ Al coating. Scattered nuclei were detected using a highly segmented parallel-plate avalanche detector array. γ radiation in coincidence with the reaction products was detected using the GAMMASPHERE array with 100 Ge detectors. Measured $E\gamma$, $I\gamma$, $\gamma\gamma$. Deduced intraband and interband E2 matrix elements for the g.s., S and γ -vibrational bands.

[†] Values as shown on the level scheme of **2001Wu05**.

[‡] Band(A): $K^\pi=0^+$ g.s. band. **2001Wu05** report that this band crosses the S band at $J^\pi=18^+$.

[#] Band(B): $K^\pi=2^+$, γ band.

[@] Band(C): S band. **2001Wu05** report that this band crosses the g.s. band at $J^\pi=18^+$. They also report that the quadrupole deformation of this band is $\approx 20\%$ larger than those of the near-lying bands.

[&] Band(D): $K^\pi=2^-$ octupole-vibrational band.

^a Band(E): $K^\pi=4^+$ band. **2001Wu05** estimate that this band contains $\approx 11\%$ of the two-phonon γ -vibration.

^b Band(F): Proposed second excited $K^\pi=4^+$ band. **2001Wu05** estimate that this band contains $\approx 25\%$ of the two-phonon γ -vibration.

 $\gamma(^{162}\text{Dy})$

2001Wu05 extracted electromagnetic matrix elements for a number of γ 's from their measured γ -ray yields using a Coulomb-excitation code. In particular, E2 matrix elements were deduced for a number of transitions connecting the S band and the γ -vibrational band.

Unless noted otherwise, the listed B(E2) values were derived by the evaluator from the E2 matrix elements reported by **2001Wu05** using the relation $B(E2; J_i \rightarrow J_f) = [M(E2; J_i \rightarrow J_f)]^2 / (2J_i + 1)$ (from a private communication from C. Y. Wu).
