[1988Gr14](#), [1990An31](#):  $^{164}\text{Gd}$  produced in  $^{252}\text{Cf}$  SF decay. The assignment is based on the observation of Tb K x ray-lines, produced in the daughter nucleus due to internal conversion.

For theoretical nuclear structure calculations, consult NSR database, for about 20 references. These are listed in the ENSDF dataset as document records.
