**2015Da03:** E( $^{78}\text{Kr}$ )Kr=380 MeV from K=130 cyclotron at JYFL facility. Measured E $\gamma$ , I $\gamma$ , E $\alpha$ , fusion products recoiling out of the target,  $\gamma(\theta)$ , (recoil) $\alpha\gamma\gamma$ -coin,  $\alpha\gamma\gamma$ -coin. Gamma rays were detected using JUROGAM array of 43 Compton-suppressed HPGe detectors. Reaction residues recoiling out of the target were separated from the primary beam using the gas-filled recoil separator RITU, and collected in the GREAT spectrometer for particle identification based on tof and energy loss information. Recoil-decay tagging (RDT) method. Deduced levels, J,  $\pi$ , band, configurations.
