

$^{173}\text{Yb}(\text{p},\text{t})$ **1973Oo01**

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Coral M. Baglin, E. A. Mccutchan		NDS 151, 334 (2018)	30-Jun-2018

Target $J^\pi=5/2^-$.E(p)=19 MeV; Yb metal targets enriched to 85.1% in ^{173}Yb ; measured E(level) (mag spect, FWHM=10-12 keV), angular distributions, absolute differential cross sections. ^{171}Yb Levels

E(level)	L [†]	E(level)	L [†]	E(level)	J ^π	L [†]	E(level)	L [†]

[†] From DWBA analysis of angular distributions; dominant L-value only is given.[‡] Possible doublet (wider than normal peak).

Corrected for contaminant from another Yb isotope.

@ Doublet (wider than normal peak).

& Strong L=0 transfer; level is probably K=0 vibrational state based on 5/2[512] orbital.
