1981Gi01: Reaction $^{176}\text{Lu}(\text{t},\text{p})^{178}\text{Lu}$, E(t)=17 MeV. Emitted protons analyzed with a Q3D magnetic spectrometer, fitted with a position sensitive proportional detector with a FWHM \approx 15 keV resolution. Measurements taken at 5° steps from $\theta=15^\circ$ to $\theta=60^\circ$. Determine L-transfer values by comparison of experimental angular distributions with theoretical DWBA calculations.

 ^{178}Lu Levels

The level energies have been recalculated by the evaluators using the value $Q(\text{t},\text{p})=4616.1$ 35 keV, based on the AME2003 updated atomic mass values ([2003Au03](#)). This replaces the $Q(\text{t},\text{p})=4581$ 40 keV used by [1981Gi01](#), which agrees with values from the 1977 atomic mass adjustment ([1977Wa08](#)). See Comments column for original data from [1981Gi01](#).

E(level) [‡]	J [†]	L	Comments
133 [#] 6	7 ⁻	0	E=98 keV (1981Gi01).
332 [#] 6	(8 ⁻)		E=297 keV (1981Gi01).
403 6			E=368 keV (1981Gi01).
553 [#] 6	(9 ⁻)		E=518 keV (1981Gi01).
821 [#] 6	(10 ⁻)		E=786 keV (1981Gi01).
1198 6			E=1163 keV (1981Gi01).
1364 6	7 ⁻	0	E=1329 keV (1981Gi01). The proton intensity to this level is \approx 85 % of that to the 98 keV level (1981Gi01).
1451 7			E=1416 keV (1981Gi01).
1512 7			E=1477 keV (1981Gi01).
1671 7			E=1636 keV (1981Gi01).
1692 7			E=1657 keV (1981Gi01).
1726 7			E=1691 keV (1981Gi01).
1854 7			E=1819 keV (1981Gi01).
1886 7			E=1851 keV (1981Gi01).
1958 7			E=1923 keV (1981Gi01).

[†] $J^\pi=7^-$ spins were assigned on the basis of population in the $^{176}\text{Lu}(\text{t},\text{p})^{178}\text{Lu}$ reaction by L=0 transitions from the ^{176}Lu $J^\pi=7^-$ ground state. Spins of other states are tentative and based on assuming a $K^\pi=7^-$ based rotational band structure.

[‡] The level energy uncertainty is mainly due to the \approx 5 keV uncertainty in the peak positions below 1.4 MeV and \approx 7 keV above this value in the proton spectra, with a smaller contribution due to the uncertainty in the $Q(\text{t},\text{p})$ value.

[#] Band(A): $K^\pi=7^-$ rotational band. Suggested configuration ([1981Gi01](#)): π 7/2⁺[404] + ν 7/2⁻[514].
