

¹⁸⁶W(d,p),¹⁸⁶W(pol d,p) 2008Bo26,1997Bo14,1972Ca01

Type	Author	History	
		Citation	Literature Cutoff Date
Full Evaluation	M. S. Basunia	NDS 110, 999 (2009)	1-Nov-2008

Other measurements: [1973Ca09](#) and [1965Er03](#).

2008Bo26: ¹⁸⁶W(d,p), ¹⁸⁶W(Pol d,P); 99.8% enriched ¹⁸⁶W; for ¹⁸⁶W(d,p) E=22 MeV; Q3d spectrograph, position sensitive cathode strip detector; reaction product measured at 10°, 13°, 16°, 20°, 30°, 40°; another measurement with E=18 at 40°. For ¹⁸⁶W(Pol d,P) E=18 MeV; charged particle measured at 3° interval between 11° to 26° and then 5° interval between 30° to 50°. Reported differential cross section, deduced level energy, l value, spectroscopic strengths, analyzing power, etc.

1997Bo14: ¹⁸⁶W(d,p), Target: 99.8% enriched ¹⁸⁶W; Projectile: d, E=24 and 28 MeV; spectra at 30° and 50° scattering angles were measured with a position sensitive cathode strip detector with single strip readout; Measured: relative intensities, deduced level energies, l values, and J^π.

1972Ca01: ¹⁸⁶W(d,p), Target: ¹⁸⁶W. Projectile: d, E=12.08 MeV, Cross sections were measured at θ=60°, 90°, and 125°.

1973Ca09: ¹⁸⁶W(Pol d,P), Target: ¹⁸⁶W; Projectile: Pol d, E=12.08- and 15.0-MeV. Experimental resolution is 25-35 keV FWHM; Data were taken at seven angles in the range of 30°–125°, Deduced level energy and assigned J^π on the basis of vector-analyzing power.

Q(d,p)=3236 5 ([1965Er03](#)), Q(d,p)=3240 10. Other: [1963Is01](#).

¹⁸⁷W Levels

[†] From [2008Bo26](#), except otherwise noted. Proposed levels 752-, 1147-, 1251-, 1511- and 1541-keV ([1997Bo14](#)) are not observed in the revised experiment and concluded as non existing ([2008Bo26](#)).

[‡] Also reported in the $^{186}\text{W}(\text{Pol d,P})$ study ([1973Ca09](#)).

[#] From L values and band assignments along with the $^{186}\text{W}(\text{n},\gamma)^{187}\text{W}$ reaction study in [2008Bo26](#).

^a From $^{186}\text{W}(\text{Pol d,P})$, deduced by [1973Ca09](#) on the basis of vector-analyzing power (normalized to 0, 77, and 205 levels), angular distributions, and previous evidence from (d,p) and (n,γ) data. DWBA analysis was performed.

[&] On the basis of l=3 shaped angular distributions and analyzing powers.

^a From [2008Bo26](#), except otherwise noted. The L values are extracted by [2008Bo26](#) from DWBA calculation and angular distribution. In [1972Ca01](#) L value was extracted from cross-section ratios at $\theta=60^\circ$, 90° , and 125° . In [1997Bo14](#), L values are assigned from the average intensity ratio at 28 MeV (measured by [1997Bo14](#)) to the 12 MeV at 60° (measured by [1972Ca01](#)). The L values of [2008Bo26](#), [1997Bo14](#), [1972Ca01](#) are mostly consistent and the differences are noted, if any.

^b From [2008Bo26](#). $L \geq 5$ is predicted by [1972Ca01](#).

^c Anomalous angular distribution reported by [2008Bo26](#).

^d From [2008Bo26](#) at 20° . $d\sigma/d\omega(\mu\text{b}/\text{sr})$ of 10° and 30° is given in the comments section.

^e Revised data of 28 MeV measurements by [1997Bo14](#).
