2010Fu04: Neutrons from 1 eV to 1 MeV produced in bombardment of 20 GeV/c protons on a Pb target at n_TOF, CERN.

Measured neutron spectra by the time-of-flight technique.

Resonance parameters extracted using the code SAMMY for a full R-matrix fit of the capture yields. Average resonance parameters were derived by a statistical analysis to provide a comprehensive experimental basis for modeling stellar neutron capture rates of these isotopes in terms of the Hauser-Feshbach statistical model. Discussed consequences for s-process component of the ^{187}Os abundance and evaluation of time duration of galactic nucleosynthesis via Re/Os cosmochronometer.

Values with no uncertainty listed in the data field or comments were kept fixed during the fitting procedures.

Others: [2010Mo15](#), [2010Mo16](#), the same collaboration.

Neutron resonances and associated parameters are given in the following references: [1986Wi09](#), [1980Be36](#) (also

[1974Be78](#),[1974Be75](#)), [1978Ba69](#), [1976St14](#) ([1975Na02](#),[1973Na11](#) by the same group), [1970We04](#), [1971Ka59](#), [1969Ve10](#).

The following resonances have been reported ([1986Wi09](#),[1980Be36](#),[1976St14](#)):

$J^\pi=1^-$ resonances (energy in eV): 9.5, 12.73, 20.24, 26.34, 29.33, 39.51, 40.54, 43.48, 47.80, 50.59, 65.01, 71.43, 83.36, 89.90, 92.84, 104.96, 108.79, 114.59, 122.94, 126.89, 132.13, 138.13. A 79.5 eV resonance reported by [1976St14](#) only.

$J^\pi=0^-$ resonances (energy in eV): 50.06, 62.16, 63.76, 99.24, 110.96, 117.11, 124.33. A resonance at 78.0 reported by [1976St14](#) only.

Resonances without J^π assignment (energy in eV): 141, 145, 156, 165, 168, 171, 177, 179, 189, 201, 207, 211, 213, 218, 227, 233, 236, 245, 250, 253, 259, 269, 279, 291, 298. Above 250 eV, values are given by [1975Na02](#) only.

[Additional information 1](#).

[†] S(n)(^{188}Os)+E(n)(c.m.), where S(n)=7989.61 *15* (**2017Wa10**) and E(n) is the neutron resonance energy. Recoil correction is 0.05 eV to 16 eV over the range of 10 eV to 3.0 keV.

[‡] All spins are defined from a s-wave capture $J^\pi(^{187}\text{Os})=1/2^-$.

[#] g=statistical weight factor=(2J+1)/(2s+1)(2I+1), where J is the spin of the compound state, I is the spin of the target (I=1/2) and s is the spin of the incident neutron (s=1/2).
