

^{189}W β^- decay (11.6 min) 1997Ya03,2009Yu11

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	T. D. Johnson, Balraj Singh		NDS 142, 1 (2017)	15-Apr-2017

Parent: ^{189}W : E=0; $T_{1/2}$ =11.6 min 2; $Q(\beta^-)$ =2360 40; $\% \beta^-$ decay=100.0

^{189}W - $Q(\beta^-)$: From 2017Wa10. Other: $Q(\beta^-)$ =2443 41 from measured mass excess(^{189}Re)=-38063 10 (2013Sh30) and mass excess(^{189}W)=-350620 40 (2017Wa10).

1997Ya03: 14.7 MeV neutrons irradiating 2-5 g of natural Os target for 20-30 minutes. Chemical separation of Re. Measured E_γ , I_γ . Determined ^{189}W half-life. HPGe detector.

1997Mi27: ^{188}W irradiated by the reactor neutrons. Measured E_γ , I_γ . Determined ^{189}W half-life. Ge(Li) detector.

2002Mi40: ^{189}W produced by $^{192}\text{Os}(n,\alpha)$ reaction. Target: 35 mg of Os metal, enriched to 99.9%. Measured E_γ , I_γ . Determined ^{189}W half-life. Ge detector.

2009Yu11: (n, α) reaction with 14-MeV neutrons from the Cockcroft-Walton accelerator at the Institute of Modern Physics, Chinese Academy of Sciences irradiated Os targets to produce ^{189}W , the decay of which was subsequently observed. The (x-ray) γ coin measurements were used to identify the 260.2 keV γ line in ^{189}Re and a lifetime measurement in agreement with previously measured half-lives of ^{189}W corroborated this identification. A clover detector consisting of four coaxial Ge crystals was used for $\gamma\gamma$ coincidences. Measured E_γ , half-life of ^{189}W decay, singles γ , (x ray) γ^- and $\gamma\gamma$ coincidences.

Other: 1965Ka07.

The decay scheme is based on the γ -ray data and the reaction data of 1997Ya03, 1977Hi06 and 1976Hi08. The γ placements are based on coincidence data from 2009Yu11. In view of $Q(\beta^-)$ =2360 keV and the highest populated level at 490 keV, and many unplaced γ rays, this decay scheme is considered as incomplete, thus no normalization is attempted.

 ^{189}Re Levels

E(level)	J^π †	$T_{1/2}$
0	5/2 ⁺	24.3 h 4
260.4 2	3/2 ⁺	
471.0 3		
490.1 3		

† From Adopted Levels.

 β^- radiations

E(decay)	E(level)	Comments
(2.36×10^3) 4)	0	E(decay): measured $E\beta=2.5 \times 10^3$ keV 2; not observed in coincidence with $E_\gamma > 60$ keV, but branch is weak.

[†] From 1997Ya03, unless otherwise specified.

[‡] From 1997Ya03, however, not observed in 1997Mi27 or 2002Mi40.

From 1997Ya03 and confirmed by coincidence measurements in 2009Yu11, however, not observed in 1997Mi27 or 2002Mi40.

@ Total theoretical internal conversion coefficients, calculated using the BrIcc code (2008Ki07) with Frozen orbital approximation based on γ -ray energies, assigned multiplicities, and mixing ratios, unless otherwise specified.

^x γ ray not placed in level scheme.
