[†] Uncertainty=0.3 keV for resolved and 0.5 keV for unresolved peaks (1982Ne05).

[‡] Assigned (by evaluators) on the basis of $\gamma(\theta)$ data. 1982Ne05 give explicit E2, M1, etc. based on $\gamma(\theta)$ and band assignment.

From $\gamma\gamma$. Unresolved in singles spectrum.

@ Multiply placed with intensity suitably divided.
