

**Adopted Levels, Gammas**

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Jun Chen and Balraj Singh		NDS 177, 1 (2021)	3-Sep-2021

Q(β<sup>-</sup>)=-8185 18; S(n)=10050 20; S(p)=4020 19; Q(α)=4738 17 2021Wa16  
 S(2n)=17799 18, S(2p)=6774 23, Q(ε)=2730 22 (2021Wa16).

Hyperfine structure measurements: 1990Di09, 1987Di06.

Mass measurement: 2000Ra23 (also 1999Sc46).

**Additional information 1.**

Theoretical references: consult the NSR database (www.nndc.bnl.gov/nsr/) for 243 primary references dealing with nuclear structure, α decay, and cluster decay half-life calculations.

Level scheme of high-spin states including those for normal bands with the placements of transitions is based on that of 2009Ku03 in <sup>168</sup>Er(<sup>30</sup>Si,4nγ), which is extended with respect to the detailed level scheme of 2002Ka01 in <sup>184</sup>W(<sup>16</sup>O,6nγ) and has been adopted by the evaluators in Adopted Levels, Gammas, because of higher statistics and completeness. Level scheme of super-deformed (SD) bands is from (HL,xny):SD (1997Ha24,1994Hu10) and the absolute excitation energy of the bandhead of SD-1 band is determined by 1997Ha24 and 1996Lo12.

<sup>194</sup>Pb Levels

Band configurations are given by 2009Ku03 in (<sup>30</sup>Si,4nγ) in terms of quasiparticle labels, where A, B, C and D refer to i<sub>13/2</sub> quasineutrons and E, F to natural-parity quasineutrons of p<sub>3/2</sub> and f<sub>5/2</sub> origin. The proton pairing is neglected as there are only a few involved above the Z=82 gap. Example: νi<sub>13/2</sub><sup>-2</sup>⊗π(h<sub>9/2</sub><sup>+2</sup>)<sub>8+</sub> is labeled as AB8. See details on page 17 of 2009Ku03 paper.

<sup>†</sup> From a least-squares fit to γ-ray energies, assuming ΔEγ=0.3 keV for those quoted to tenth of a keV and 1 keV for those quoted to nearest keV.

<sup>‡</sup> For levels populated in (HI,xnγ) reactions, it is assumed that spins ascend with excitation energy in such reactions, where yrast pattern of levels is populated.

# Band(A): Band based on (14<sup>+</sup>).

@ Band(B): Band based on (12<sup>+</sup>).

& Band(C): Magnetic-rotational band-1 based on (15<sup>+</sup>) Configuration=AE11 and ABCE11 above the band crossing.

<sup>a</sup> Band(D): Band based on (22<sup>+</sup>). This short band decays into band-1.

<sup>b</sup> Band(E): Band based on (23<sup>+</sup>). This short band decays into band-1.

<sup>c</sup> Band(F): Magnetic-rotational band-2 based on (15<sup>+</sup>). Configuration=AB8 and ABCD8 above the band crossing.

<sup>d</sup> Band(G): Magnetic-rotational band-3. Configuration=AF11 and ABCF11 above the band crossing.

<sup>e</sup> Band(H): Magnetic-rotational band-4 based on (17<sup>-</sup>). Configuration=AB11 and ABCD11 above the band crossing.

<sup>f</sup> Band(I): Band based on (20<sup>-</sup>). This short band decays into band-4.

<sup>g</sup> Band(J): Band based on (14<sup>-</sup>).

<sup>h</sup> Band(K): Magnetic-rotational band-5 based on (20<sup>-</sup>). Configuration=ABEF11 and ABCDEF11 above the band crossing.

 $^{194}\text{Pb}$  Levels (continued)

- <sup>i</sup> Band(L): Magnetic-rotational band-6 based on (14<sup>-</sup>). Configuration=AE8.
- <sup>j</sup> Band(M): Band based on (9<sup>-</sup>).
- <sup>k</sup> Band(N): Magnetic-rotational band-7 based on (21<sup>-</sup>). This band may be continuation of band-6. Configuration=ABCE8.
- <sup>l</sup> Band(O): SD-1 band. Band from [1997Ha24](#), [1996Br07](#), [1995Ga10](#), [1990Br10](#), [1990Hu10](#), [1993Wi02](#), [1993Ko08](#), [1993Ha20](#), [1994Hu10](#), [1994Kr18](#), [1995De26](#), [1996Lo12](#), [1997Ha44](#), [1997Kr03](#), [1998Va18](#), [1999Lu04](#), [2000Mc01](#)). Average Q(intrinsic)=20.1 +3-5 (centroid-shift method) ([1998Va18](#)), 20.7 19 (line shape analysis) ([1998Va18](#)); 20.6 13 ([1994Kr18](#)). Percent population ([1995De26](#)): 1.0 2, 1.0 1, 1.2 3 in  $^{184}\text{W}(^{16}\text{O},6n\gamma)$ ; 1.1 3 in  $^{184}\text{W}(^{17}\text{O},7n\gamma)$ ; 0.7 2, 0.9 3 in  $^{164}\text{Dy}(^{34}\text{S},4n\gamma)$ ; 0.8 2 in  $^{162}\text{Dy}(^{36}\text{S},4n\gamma)$ . From smooth extrapolation to J=0, the bandhead is estimated at 4640.7 4 ([1997Ha24](#)).
- <sup>m</sup> Band(P): SD-2 band. Band from [1994Hu10](#). Percent population  $\approx 0.05$  (5% of SD-1 band).
- <sup>n</sup> Band(Q): SD-3 band (?). Tentative (possibly a signature partner of SD-2 band) band from [1994Hu10](#) with percent population  $\approx 0.06$  (6% of SD-1 band).

$\dagger$  From  $^{168}\text{Er}(^{30}\text{Si},4n\gamma)$  (2009Ku03), unless otherwise noted.

$\ddagger$  From  $^{194}\text{Bi}$   $\varepsilon$  decay (1987Va09).

# From (HI,xn $\gamma$ ):SD.

@  $\gamma$  inferred from  $\gamma\gamma$  coincidence data in ( $^{30}\text{Si},4n\gamma$ ) (2009Ku03), not observed directly. Energy from level-energy difference.

& From ce data in  $^{194}\text{Bi}$   $\varepsilon$  decay up to 2934 level, and/or, ce,  $\gamma(\theta)$  and  $\gamma(\text{lin pol})$  in  $^{184}\text{W}(^{16}\text{O},6n\gamma)$ , unless otherwise noted.

<sup>a</sup> From  $\gamma$  asymmetry ratio in (HI,xn $\gamma$ ):SD (1997Ha24), with magnetic or electric nature from level scheme.

<sup>b</sup> Total theoretical internal conversion coefficients, calculated using the BrIcc code (2008Ki07) with Frozen orbital approximation based on  $\gamma$ -ray energies, assigned multipolarities, and mixing ratios, unless otherwise specified.

<sup>c</sup> Placement of transition in the level scheme is uncertain.
