

$^{195}\text{Pt}(\text{n},\text{n}'\gamma)$ **1983Gh01**

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Huang Xiaolong and Kang Mengxiao		NDS 121, 395 (2014)	1-Mar-2014

E=0.5-2.0 MeV.

Measured $E\gamma$, $I\gamma$, and $\sigma(E, E\gamma, \theta)$ with Ge(Li). Compared data with predictions of multi-J supersymmetry in interacting boson-fermion approximation. ^{195}Pt Levels

† ΔE not given by authors. $\Delta E=1$ keV assumed in using least-squares fit to data.

‡ Transition obscured by stronger γ ray or by spectral complications.

Relative photon branching from each level. The uncertainties are generally $\approx 15\%$ for $E_\gamma > 500$ keV and are larger for lower energy γ rays.

@ A_2 coefficients measured in $\gamma(\theta)$ (1983Gh01).

$^{195}\text{Pt}(n,n'\gamma) \quad 1983\text{Gh01}$
