

¹⁹⁷Au(n,γ) E=res:primary 1973Lo11

| Type | Author | History | Citation | Literature Cutoff Date |
|-----------------|----------------------------------|---------|---------------------|------------------------|
| Full Evaluation | Huang Xiaolong and Kang Mengxiao | | NDS 133, 221 (2016) | 1-Dec-2015 |

Target $J^\pi=3/2^+$.

Others: 1968Wa17, 1969Sa10, 1970Bu04, 1979Jo10, 1981St16.

Measured primary E_γ , I_γ from 1^+ resonances at 46, 58, 78, 144, 163, 190, 262 eV, and from 2^+ resonances at 4.9, 60, 107, 122, 151, 165, 209, 240, 274, 293, 355 eV. For res parameters, see 1984MuZY.

¹⁹⁸Au Levels

$J^\pi=1\pm, 2\pm$ level assignments are based on the multipolarity assumptions. $J^\pi=2^-$ for the g.s. is known from other work. $J=3$ and 0 level spins are suggested by population only from 2^+ and 1^+ resonances, respectively.

See 1968Wa17 for 50 additional levels with $E(\text{level})=1210-1733$.

Nuclear temperature and level density at S(n) are related to complex (n,γ) spectra (1974Co23).

[†] From primary γ-ray measurements.

[‡] From J^π of resonance neutron capture state and multipolarity of primary γ; except g.s., where J^π is from Adopted Levels, and 6513, where J^π is based upon the assumption of s-wave neutron capture.

From Adopted Levels.

@ From s-wave neutron capture.

γ(¹⁹⁸Au)

Authors deduce E1 or M1 assignments for primary γ's on the basis of I_γ strength.

See 1974Ja14 for further analysis of I_γ data of 1973Lo11.

See 1973Lo11 for I_γ values for individual resonances.
