Adopted Levels, Gammas (continued) **$\gamma(^{198}\text{Pb})$ (continued)**

‡ From ^{198}Bi ε decay.

From DCO ratios with known stretched E2 or M1 transitions, and band structure in (HI,xn γ), except as noted.

@ Total theoretical internal conversion coefficients, calculated using the BrIcc code (2008Ki07) with Frozen orbital approximation based on γ -ray energies, assigned multipolarities, and mixing ratios, unless otherwise specified.

& Multiply placed with undivided intensity.

^a Multiply placed with intensity suitably divided.
