7393 15				$E\alpha$ : from 2000He17 with $I\alpha=0.05$ 3 relative to $E\alpha=7453$ peak. If this decay does exist, it implies a isomeric state of $^{216}\text{Rn}$ at $Ex \approx 60$ . It is very unlikely to have an excited state at this energy for even-even nuclei.
7001 6	461.4	1.0 4	2.7 11	$E\alpha$ : from E(level). $I\alpha$ : from $\gamma$ data.
7453 7	0	99.0 4	1.00	$E\alpha$ : weighted average of 7449 10 from 2000He17, 7455 10 from 1970Va13 and 7460 20 (1989An13). Other: 7450 (1961Ru06). $I\alpha$ : from $I\alpha(7001\alpha)$ and requirement that $\Sigma I\alpha=100$ .

<sup>†</sup> The requirement that HF( $7453\alpha$ )=1.00 yields  $r_0(^{216}\text{Rn})=1.554$  6.<sup>‡</sup> Absolute intensity per 100 decays. $\gamma(^{216}\text{Rn})$  $I\gamma$  normalization:  $I\gamma$  per 100  $\alpha$  decays.
