Additional information 1.

1973Ha32: ²¹⁹Th activity was produced by ²⁰⁶Pb(¹⁶O,3n), E=80-90 MeV. Isotopic assignment was based on its genetic relationship to ²¹⁵Ra, and also on excitation functions. Measured half-life of decay of ²¹⁹Th.

Theoretical calculations: 31 primary references in the NSR database (www.nndc.bnl.gov/nsr), six related to structure calculations, and 25 to radioactivity.

J ^{π} : from systematics of N=129 isotones from ²¹¹ Pb to ²¹⁷ Ra, and comparison of g.s. J ^{π} values of N=127 and N \geq 131 Th isotopes with corresponding Ra isotopes. Configuration= ν g _{9/2} ³ , seniority=1 state.
