[†] From [2009Ma68](#), except otherwise noted. [2001Ba17](#) used calibration energies of 5037.0 14 and 5713.9 keV 12. Present adopted energies for these levels are 5035.4 and 5711.4 keV. Revised level energies are noted in [2009Ma68](#). In [2009Ch28](#), the reported excitation energy and uncertainties are average data from the 16 strips of detector. These data are listed as comments.
