

²²⁹U ε decay 1982Ah08,1989AhZZ

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	E. Browne, J. K. Tuli		NDS 109, 2657 (2008)	1-Jun-2008

Parent: ²²⁹U: E=0.0; J^π=(3/2⁺); T_{1/2}=58 min 3; Q(ε)=1305 14; %ε+%β⁺ decay≈80.0

Twelve of the nineteen observed γ-ray transitions have not been placed in the decay scheme. Thus, the decay scheme is incomplete, and the evaluators have not deduced neither absolute photon intensities nor ε branchings.

²²⁹Pa Levels

E(level) [‡] #	J ^π [†]	Comments
0.0 ^{&}	(5/2 ⁺)	
11.2 ^{&} 7	(7/2 ⁺)	
11.6 [@] 3	(3/2 ⁻)	Additional information 1.
133.9 ^b 7	(5/2 ⁻)	
222.3 ^a 8	(3/2 ⁺)	
253.2 ^a 8	(7/2 ⁺)	
470.1 8		

[†] Adopted values.

[‡] Deduced by evaluators from least-squares fit to γ-ray energies.

There is no clear evidence of a parity doublet within 0.2 keV from ²²⁹Pa g.s. as proposed in 1982Ah08. An alternative explanation is given rather than assuming the existence of a 0.22-keV level (1991Gr13). Evaluators have adjusted by 11.6 keV (from 1994Le22) all level energies in 1982Ah08. a half-life of 0.42 (3) μs was measured using delayed coincidences between protactinium x-K and 80-400-ev electrons (1982Ah08).

@ Band(A): 1/2⁻[530].

& Band(B): 5/2⁺[642].

^a Band(C): 3/2⁺[651].

^b Band(D): 5/2⁻[523] + 5/2⁻[512].
