

$^{22}\text{Na}(\text{n},\text{p}),(\text{n},\alpha)$: res 1982Gi07,1971Eh01

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	M. S. Basunia [#] , A. Chakraborty ^{##}		NDS 171,1 (2021)	1-Jun-2020

Other: [1988Ko25](#).[1982Gi07](#): ^{22}Na target of activity $500 \mu\text{Ci}$. Measured proton emission spectrum alpha from capture state with Si detector.[1971Eh01](#): ^{22}Na target of activity $2 \mu\text{Ci}/\text{cm}^2$. Measured proton and alpha emission from capture state with Si detector. Measured 35900 b 1200 total cross section. ^{23}Na Levels

E(level)	J ^π	Γ	Comments
0.0 1.235×10^4	31		E(level): Average from $\text{Ep}(0)(\text{c.m.})=4000$, $\text{Ep}(1275)(\text{c.m.})=2250$ for proton emission to levels in ^{22}Ne ; and $\text{E}\alpha(0)(\text{c.m.})=1770$, $\text{E}\alpha(110+197)(\text{c.m.})=1430$ to levels in ^{19}F (1971Eh01). Overlaps three or more in Adopted Levels – not referenced.
12419.8	$2^- (7/2^+, 5/2^+)$	116 eV	E(level): From neutron resonance state at 0.145 keV 11 (1982Gi07) and $\text{Sn}=12419.66$ 17 (AME2016 – 2017Wa10) . From $\text{Ep}(\text{Lab})=2250$ keV and 3470 keV to 1st and g.s. of ^{22}Ne – would result 12421.2 keV, considering $\text{Sp}=8792.10$ 2 (AME2016 – 2017Wa10) . J ^π : Based on measured Γ_{p0}/Γ_{p1} and shell model calculations. Γ: From $\Gamma_{n0}=1.6$ eV 2 , $\Gamma_{p1}=114$ eV 20 , and $\Gamma_{p0}=0.7$ eV.
