[†] Assignments by **1978Jo05**, based on L-transfers deduced from $d\sigma(d,t)/d\sigma({}^3\text{He},\alpha)$ ratios and angular distributions, and on comparison of measured cross sections with theoretical ones (fingerprint method). See also $^{234}\text{U}(d,t)$ dataset.

[‡] Values given without uncertainties are from $^{234}\text{U}(d,t)$ data in **1978Jo05**. Population of these levels in $({}^3\text{He},\alpha)$ is indicated in Fig. 2 of **1978Jo05**, but no cross section data are available.
