
 $^{232}\text{Th}(\text{t},\text{p}) \text{ E=20 MeV} \quad 1973\text{Ba72}$

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	E. Browne, J. K. Tuli		NDS 108, 681 (2007)	1-Jun-2006

$Q(\text{t},\text{p})=2487.20$ ([1969Br11](#)).

No excited 0^+ state was observed by [1972Ca19](#) in $^{232}\text{Th}(20 \text{ MeV t},\text{p})$ reaction. See [1980Ab03](#) for calculations of (t,p) spectroscopic factors for populations of such 0^+ states as a function of quadrupole deformation parameter.

 $^{234}\text{Th} \text{ Levels}$

Measured maximum σ 's were: $\sigma(0^+):\sigma(2^+):\sigma(4^+)=83:30:3$.

$E(\text{level})^\dagger$	$J^\pi \ddagger$
0	0^+
48 2	2^+
160 5	4^+

† Measurements by [1973Ba72](#).

‡ Adopted values.
