 ^{235}Np Levels

The levels at 756, 779 and 819 were suggested in 1973Ja03 that they belong to the 3/2[521] rotational band; however, ($^3\text{He},\text{d}$) and (α,i) results suggest that this bandhead is at 565 keV. Analogy with ^{231}Th β^- decay suggests that the main ε branches should feed the 3/2[651] and 3/2[532] rotational bands in ^{235}Np , in addition to the well established 5/2[642] and 5/2[523] rotational bands.
