The reaction $^{22}\text{Ne}(\alpha, \text{d})$ with the projectile energy of 64.3 MeV was used. The reaction products were detected on the focal plane of a QDD spectrograph by using a single-wire proportional counter. Enriched gas target was used. Measured $\sigma(E_{\text{d}}, \theta)$, from 10.5° to 78° (laboratory angle). Performed DWBA analysis. Extracted L, π , J values. FWHM=70 to 110 keV. Other: [1975La11](#).
