1973Ba72 (also 1972Ca19): E=16 MeV. Angular distributions measured. FWHM=15-20 keV. Comparison of  $\sigma(\theta)$  with DWBA predictions for first  $0^+$ ,  $2^+$  and  $4^+$  states.

$^{238}\text{U}(\text{t,pF})$ : 1977An09 (E=12.7 MeV); 1974Ba28 (E=15 MeV), 1970Cr09 and 1969Br11 (E=18 MeV). Deduced fission probability; Q value measured in 1969Br11.
