

$^{30}\text{Mg} \beta^-$ decay (319 ms) 2016O106, 2008Hi05, 1984Gu19

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	M. S. Basunia, A. Chakraborty		NDS 197,1 (2024)	31-May-2024

Parent: ^{30}Mg : E=0.0; $J^\pi=0^+$; $T_{1/2}=319$ ms 6; $Q(\beta^-)=6982.7$ 23; % β^- decay=100

^{30}Mg - $T_{1/2}$: From ^{30}Mg Adopted Levels.

^{30}Mg - $Q(\beta^-)$: From 2021Wa16.

Other: 1979De02.

2016O106: ^{30}Mg produced by bombarding UC_x/graphite target (thickness a 45 g/cm²) with 1.4-GeV protons pulses. The fragments were mass-separated and deposited onto a thin aluminum stopper directly in front of a β detector. β particles were detected with a fast-timing 3-mm-thick plastic scintillator and γ rays were detected with two fast-response scintillating BaF₂ crystals and two HPGe detectors. Measured $E\gamma$, $I\gamma$, $E\beta$, $I\beta$, $\gamma\gamma$ -coin, $\beta\gamma\gamma(t)$, $\beta\gamma(t)$. Deduced levels, J , π , half-lives, decay branching ratios, transition strengths.

2008Hi05: ^{30}Mg produced in reaction $^9\text{Be}(^{48}\text{Ca},X)$, E=140 MeV/u at NSCL; A1900 fragment separator; Particles implanted in double-sided silicon strip detector, segmented array of 12 Ge detectors; Measured: $E\gamma$, $I\gamma$, $\beta\gamma\gamma$ coin, deduced level scheme.

1984Gu19: ^{30}Mg was produced in the fragmentation of iridium target by 10 GeV protons from the CERN synchrotron, recoiled fragments were thermalized, ionized and mass-separated; Ge(Li) detector, Measured: $E\gamma$, $\beta\gamma\gamma$ coin, absolute $I\gamma$. The sum of the $I\beta$ was only 73% (1984Gu19).

The decay scheme of 1984Gu19 and 2008Hi05 is the same, 2008Hi05 reports the additional 2413 keV level. 2165 γ was reported by 1979De02 without placement, however the 2170 γ is placed from 2413 keV level by 2008Hi05.

 ^{30}Al Levels

E(level) [†]	J^π [‡]	$T_{1/2}$ [‡]	Comments
0	3 ⁺	3.62 s 6	
243.81 9	2 ⁺	15 ps 4	
687.70 11	1 ⁺	0.7 ps 2	$T_{1/2}$: same from $\beta\gamma\gamma(t)$ using centroid-shift method (2016O106).
1801.55 21	(2,3 ⁺)		
2412.68 15	1 ⁺		
3164.2 4	1 ⁺		J^π : other: (1 ⁺) in 2016O106.
3362.78 22	1 ⁺		J^π : other: (1 ⁺) in 2016O106.

(4570.0 25)	2412.68	6.7 16	4.31 11	av $E\beta=2071.4$ 12
(6295.0 25)	687.70	73 10	3.91 6	av $E\beta=2918.4$ 12

[†] From γ -ray intensity balance by the evaluators. $\sum I_\beta=81$ 11 implies of missing $E\gamma$ or incomplete decay scheme. Decay scheme normalization has been done based on measured % $I\gamma$ (443.8).

[‡] Absolute intensity per 100 decays.
