 $J^\pi(^{29}\text{Si})=1/2^+$.Other: [1994Ve04](#),[1980Kh03](#),[1970Gr30](#).

1976Dy01: Target: SiO_2 , Si either natural composition or enriched ^{29}Si (92.0%); Projectile: ${}^3\text{He}$, $E=25$ MeV; two surface barrier detectors at $\pm 30^\circ$ on either side of the beam direction, Enge split-pole spectrometer, particles detected either by photo emulsions or by six position-sensitive solid state detectors; deduced level energy, J^π and spectroscopic strength.

1974He04: Target: 95% enriched ^{29}Si ; Projectile: ${}^3\text{He}$, $E=15$ MeV; multigap spectrometer at 15 angles from 3.75° to 56.25° in 3.75° intervals, energy resolution in the range of 22 to 25 keV FWHM, proton-deuteron discrimination by kinematics and track identification; deduced level energy, l_p , J^π and spectroscopic strength.

 ^{30}P Levels

E(level) [†]	J^π [†]	l_p [‡]	G_j [#]	Comments
0		0	0.74	G_j : spectroscopic factors 0.88 ($2s_{1/2}$) and 0.19 ($1d_{3/2}$) (1994Ve04).
677 5		0	0.23	
709 5		0,2	0.09	G_j : and 0.45 (mixed).
1454 5		2	0.81	G_j : or (0.61). Other: spectroscopic factors 0.02 ($1d_{5/2}$) and 0.70 ($1d_{3/2}$) (1994Ve04).
1973 5		2	0.12	G_j : and 0.21 (mixed).
2538 5		2	0.09	G_j : and 0.23 (mixed).
2723 5		2	0.10	G_j : or (0.08).
2838 5			0.04	
2939 5		2	0.80	G_j : or (0.60). Other: spectroscopic factors 0.07 ($1d_{5/2}$) and 0.54 ($1d_{3/2}$) (1994Ve04).
3018 5		0,2	0.08	G_j : and 0.11 (mixed).
3304 5	(1 ⁺)			
3731 5	1 ⁺	0,2	0.03	G_j : and 0.08 (mixed).
3834 5	2 ^{+,1⁺}	2	0.11	J^π : from 1974He04 .
3927 5	1 ⁻	1	0.005	J^π : from 1974He04 .
4142 5		1	0.14	
4182 5		2	0.20	G_j : or (0.16).
4232 5		(3)	1.10	
4298 5				
4343 5				
4423 5		2	0.01	G_j : and 0.01 (mixed).
4468 5		0	0.11	
4501 5		2	0.47	
4625 5		3	(0.80)	G_j : or 0.54.
4739 5	(1 ⁺ to 3 ⁺)		0.01	
4921	3 ⁻	3		E(level), J^π : from 1974He04 .
4933 5				
5028 5				
5233 5	(2 to 4) ⁻		0.01	
5416 5	(0 to 2) ⁻	1	0.07	
5505 5	1 ⁺	2	0.03	G_j : and 0.05 (mixed).
5574 5	(2 ^{+,3⁺}		0.07	G_j : and 0.09 (mixed).
5598	(1 to 3) ⁺	2		E(level), J^π : from 1974He04 .
5711 5				
5808 5	(1 to 3) ⁺			
5905 5	2 ^{-,1⁻}	1	0.35	J^π : from 1974He04 .
5993 5	1 ⁻	1	0.33	J^π : from 1974He04 .
6092 5			0.90	G_j : or 0.59.
6179 5				
6231 5				
6270 5			0.06	G_j : value for $l=1$ in 1976Dy01 .
6301 5

[†] From 1976Dy01, except otherwise noted. 1974He04 reported levels upto 5994 keV and quoted level energies from compilation.

[‡] l_p values from 1974He04, except where otherwise noted.

[#] Spectroscopic strength $G_j = [(2J_f+1)/(2J_i+1)]C^2S_j$ from 1976Dy01. Spectroscopic strengths of 1974He04 are in good agreement with those of 1976Dy01.
