1994Si19: 26.6 MeV protons from U-120 cyclotron at the Institute for Nuclear Physics in Krakow. Enriched SiO_2 targets (94.65% ^{30}Si). Measured $\sigma(\theta)$, $\theta_{\text{lab}}=20^\circ-170^\circ$ with surface barrier Si $\Delta E-E$ telescope for detecting reaction products. FWHM=200 keV. DWBA analysis.

1967Mi09: E=42 MeV α beam from the University of Washington cyclotron. Measured $\sigma(\theta)$ at $\theta(\text{c.m.})=0^\circ-70^\circ$ with a $\Delta E-E$ counter. Deduced J, π , L-transfers for 1270 and 2230 levels from DWBA analysis.

Other: **1987BeZO**.
