

$^{30}\text{Si}({}^3\text{He,p}),({}^3\text{He,p}\gamma)$  1975Na05

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Christian Ouellet, Balraj Singh		NDS 112, 2199 (2011)	24-Aug-2011

**1975Na05:** ( ${}^3\text{He,p}$ ) E=28 MeV from the MP tandem accelerator of the Max Planck Institute in Heidelberg. Enriched targets of  $\text{SiO}_2$  foils (98%  $^{30}\text{Si}$ ). Protons momentum analyzed in a magnetic multigap spectrometer with nuclear emulsion detectors. FWHM=40-45 keV. Measured angular distributions, DWBA calculations.

**1972Fo12:** ( ${}^3\text{He,p}\gamma$ )  ${}^3\text{He}$  beam from the 4MV Van de Graaff accelerator of the Institut de Physique Nucleaire at Orsay. Enriched  $^{30}\text{Si}$  target (95%). Ge detectors. Measured  $\sigma(\theta)$  and coincidence  $E_\gamma$  and  $I_\gamma$  of 5073 keV level.

**1971Ad06:** ( ${}^3\text{He,p}\gamma$ ): University of Pennsylvania.  $\text{SiO}$  targets. NaI(Tl) detectors. Measured  $p\gamma$  coin and  $p\gamma(\theta)$ ,  $I_\gamma$ . [1977Ba50](#) contains the same data.
