1999Go23: 65 MeV muon beam was produced from the M9B beam line at TRIUMF. Targets were natural and enriched (99.28% ^{32}S) sulfur. Muons were stopped using a plastic scintillator and γ rays were detected with two Ge detectors. Measured $E\gamma$, $I\gamma$. Deduced levels.

1969Pr09: E at rest at the Nuclear Research Center of the Carnegie-Mellon university. Measured γ yields. Deduced levels.
