

$^{32}\text{S}(\alpha,\alpha')$ 2013It04,1973Ga30

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	Jun Chen	NDS 201,1 (2025)	31-Oct-2024

2013It04: E=386 MeV α beam was produced from Ring Cyclotron at RCNP, Osaka facility. Targets were 14.3 mg/cm² and 15.6 mg/cm² natural sulfur foils. Reaction products were momentum-analyzed with the Grand-Raiden spectrometer together with multiwire drift chambers and two plastic scintillators. Measured $E\alpha$, $I\alpha$, $\sigma(\theta)$. Deduced levels, J, π , transition strengths from multipole decomposition analysis (MDA) and DWBA analysis. Evidence for SD band structures, and $^{28}\text{Si}+\alpha$ cluster structures.

1973Ga30: E=17.5 MeV α beam was produced from the ANU EN tandem Van de Graaff accelerator. Target was natural CdS with a thickness of about 60 $\mu\text{g}/\text{cm}^2$ on a thin carbon backing. Scattered particles were detected with four surface-barrier detectors (FWHM \approx 40 keV). Measured $\sigma(E\alpha,\theta)$. Deduced levels, J, π , L-transfers.

others:

1974Gr15: E=16.5 MeV. Measured $E\alpha$.

1974An33: E=24.2 MeV. Measured $\sigma(\theta)$.

1972Sc23: E=104 MeV. Measured $\sigma(\theta)$.

1972Oe01: E=24 MeV. Measured $\sigma(\theta)$.

1970Iv04: E=12-17 MeV. Measured $\sigma(\theta)$.

1968Bu10: E=25 MeV. Measured $\sigma(\theta)$. Deduced deformation parameters.

1967Gr13: E=23.8 MeV. Measured $\sigma(\theta)$.

1966Hu11: E=12.2, 13.5, 14.8 and 16.1 MeV. Measured $\sigma(\theta)$.

 ^{32}S Levels

Band assignments are from [2013It04](#).

E(level) [†]	J π [†]	L [#]	Strength [‡]	Comments
0	N			
2230 10	N			Deformation length $\delta=\beta_2R=0.88$ fm (1968Bu10).

22.42×10 ³ 74		9.41 MeV	2		E(level): isoscalar giant quadrupole resonance. Uncertainty=+0.65–0.83 MeV. E2 EWSR=143% +9–12 (2013It04). Γ: rms width (2013It04).
23.65×10 ³ 63		9.43 MeV	0		E(level): isoscalar giant monopole resonance. Uncertainty=+0.60–0.66 MeV. E0 EWSR=108% +7–8 (2013It04). Γ: rms width (2013It04).
>25×10 ³			(4)		E(level): E4 resonance (2013It04).
31.4×10 ³ 75			3		E(level): high-energy octupole resonance. Uncertainty=+0.5–1.0 MeV (2013It04).
<50×10 ³			1		E(level): isoscalar giant dipole resonance. E1 EWSR=103% 11 (2013It04).

[†] From 1973Ga30 up to 7117 level and from 2013It04 above that, unless otherwise noted. Spin-parities are deduced from analysis of measured $\sigma(\theta)$, where N is for natural parity and U for unnatural from 1973Ga30 based on comparisons with the shapes of $\sigma(\theta)$ of levels with known spin-parities.

[‡] Isoscalar giant resonance strength from MDA analysis in 2013It04, with units of fm⁴ for E0 and E2, fm⁶ for E1, 10³fm⁶ for E3, and 10⁵fm⁸ for E4.

[#] From MDA and DWBA analysis of $\sigma(\theta)$ in 2013It04.
