

$^{42}\text{Ca}(\text{d},\text{n}) \quad \textbf{1971Bo04,1968Gr06}$

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Balraj Singh and Jun Chen [#]	NDS 126, 1 (2015)		31-Mar-2015

Target ^{42}Ca $J^\pi=0^+$.

1971Bo04: E=5.0-6.05 MeV deuteron beam was produced from the CN Van de Graaff at the Hahn-Meitner-Institute, Berlin. Target of a $100 \mu\text{g}/\text{cm}^2$ CaCO_3 enriched to 92%. Neutron energy was measured by time-of-flight, $\text{FWHM} \approx 100 \text{ keV}$. Measured $\sigma(E_n, \theta)$. Deduced levels, J, π , L and spectroscopic factors from DWBA analysis.

1968Gr06: E=5.15 MeV deuteron beam was produced from the University of Alberta 5.5 MeV Van de Graaff accelerator. Target of a 86.4% enriched ^{42}Ca metal evaporated onto a $125 \mu\text{m}$ gold backing. Measured $\sigma(E_n, \theta)$. Deduced levels, spectroscopic factors from DWBA analysis.

1992NaZN: E=25 MeV. Measured $\sigma(\theta)$, deduced spectroscopic factors. $\text{FWHM} \approx 150 \text{ keV}$. A total of 48 groups reported, out of which 22 groups are above 6.2 MeV.

1971De17: E<5.5 MeV. Measured $\sigma(E)$.

1965Ok01: measured $\sigma(\theta)$.

[†] From [1968Gr06](#), unless otherwise stated. Above 6155, levels reported by [1992NaZN](#) only are not given in the Adopted Levels due to poor resolution in this region and weak peaks, as judged from spectrum shown by [1992NaZN](#).

[#] From [1971Bo04](#). When unknown, J=3/2 for L=1 and J=7/2 for L=3 is assumed. Relative values for first few levels are also available from [1968Gr06](#). Values quoted by [1978En02](#) are (2J+1)S and have been adjusted upwards by $\approx 50\%$ based on revised normalization factor N. When values are quoted from [1992NaZN](#), the first value corresponds to L-1/2 and the second value to L+1/2.

[‡] From [1971Bo04](#), unless otherwise stated. L values from [1968Gr06](#) measured for g.s., 475, 860, 1177, 1817, 1947 and 6155 are in agreement with those from [1971Bo04](#), except for the 1947 level.

@ From [1992NaZN](#) only.
