

**<sup>42</sup>Ca(p,p):resonances 1976Wi16,1974Ma39**

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Balraj Singh and Jun Chen <sup>#</sup>		NDS 126, 1 (2015)	31-Mar-2015

S(p)=4929.8 19 (2012Wa38).

1976Wi16: E=1.2-3.0 MeV proton beams were produced from the TUNL 3 MV Van de Graaff accelerator, FWHM=325 eV.

Targets of enriched CaCO<sub>3</sub> (94.42% <sup>42</sup>Ca) on carbon backings. Elastically scattered protons were detected by surface barrier detectors. Measured σ(E,θ). Deduced resonances, levels, J, Γ<sub>p</sub>.

1974Ma39: E=1.20-3.23 MeV proton beams were produced from the Aerospace Research Laboratories (ARL) 8-MeV tandem accelerator, FWHM=200 eV. Targets of enriched CaCO<sub>3</sub> on carbon backings. Scattered protons were detected by surface barrier detectors. Measured σ(E,θ). Deduced resonances, levels, J, π, Γ.

1968Br27: E=1.24-1.82 MeV. Deduced resonances at 1240, 1792, 1802, 1817.

$^\dagger$  From **1976Wi16**, unless otherwise indicated. Uncertainty in proton energies is estimated to be 0.1 keV (as specified in a previous paper by **1976Wi16**), whereas the uncertainty in the excitation energy is 2 keV, essentially due to  $\Delta S(p)$ .

$^\ddagger$  From **1974Ma39**.

$^\#$  From theoretical fits to the experimental data.
