1999Ve11: E=34 MeV polarized $^6\text{Li}^{2+}$ beam produced from the Super FN Tandem accelerator at Florida State University. Target of 0.9 mg/cm² of natural Ca sandwiched between 0.3 mg/cm² layers of Au. Two pairs of Si ΔE-E detector telescopes for detecting deuterons. Measured $\sigma(E_d, \theta)$, analyzing powers iT₁₁(θ). Deduced levels, J^π for the g.s. and first 2⁺ level.

2011Mi02: E=21 MeV. Measured Eγ, Iγ, γγ, lifetime of first 3⁻ level by recoil-distance Doppler shift method at IFIN-HH facility using eight HPGe detectors arranged at 145° and 35° together with an array of five LaBr₃ detectors. The γγ coin data analyzed with the differential decay curve method. Complete details of this study are not yet available.

Target ^{40}Ca $J^\pi=0^+$ leading to ^{44}Ti $J^\pi=L$ in this transfer reaction.
