

$^{44}\text{Ca}({}^3\text{He},\text{d}),(\text{pol} {}^3\text{He},\text{d}) \quad 1985\text{Ha08,1966Sc17}$

Type	Author	History
Full Evaluation	T. W. Burrows	Citation
		NDS 109, 171 (2008)

1966Sc17, 1966Sc08: E=10 MeV. Measured $\sigma(\theta=7.5^\circ-50^\circ)$; mag spect, emulsions. DWBA.

1972Vo18: E=24 MeV. Measured $\sigma(\theta=8^\circ-30^\circ, 2^\circ$ steps); Q3D mag spect, position-sensitive solid-state detectors. FWHM \approx 5 keV. DWBA.

1985Ha08: E=33.1 MeV. Measured $\sigma(\theta)$ and analyzing power. Polarization=50%–60%. DWBA.

All data are from **1966Sc17**, except As noted. Others: see **1992Bu01** and **1983Bu21**.

[†] Assumed for the calculation of C²S, except As noted.

[‡] From DWBA fits. First value is for J=L+1/2; second, for J=L-1/2.

[#] From characteristic L=1 $\sigma(\theta)$, except As noted.

[@] From comparison of analyzing power to DWBA (**1985Ha08**).

[&] $\sigma(\theta)$ agrees very well with DWBA calculation (**1972Vo18**).

^a C²S(g.s.)=0.59 6 (**1985Ha08**) and C²S(15)=1.9 (**1972Vo18**).

^b From the Adopted Levels.

^c s1/2 hole state.

^d From comparison to DWBA.
