^{50}K β^-n decay 1983RaZR,1982Ca04,1998Ba80

History

Type	Author	Citation	Literature Cutoff Date
Full Evaluation	T. W. Burrows[a]	NDS 109, 1879 (2008)	14-Jul-2008

Parent: ^{50}K: E=0.0; $J^\pi=0^-$; $T_{1/2}$=472 ms *4*; Q(β^-n)=7.87×10^3 *28*; %β^-n decay=29 *3*

^{50}K-E,$T_{1/2}$: From the ^{50}K Adopted Levels In 1995Bu09.

^{50}K-J^π: 0^-,1,2,3,4^- from log *ft*=7.0 (log $f^{1u}t$=9.6) to 2^+ and 0^-,1,2^- from log *ft*=5.9 (log $f^{1u}t$=8.6) to 0^+. 1998Ba80 confirm $J^\pi=0^-$ suggested by 1991Wa23 based on the systematics and theory of first-forbidden ΔJ=0 log *ft*′s In the α=34-44 region (1988Wa30). 1995Bu09 adopted (0^-,1,2^-) since a direct and accurate measurement of feeding to ^{50}Ca g.s. was required to confirm the suggestion of 1991Wa23.

^{50}K-Q(β^-n): From 2003Au03.

^{50}K-%β^-n decay: From 1982Ca04.

1983RaZR,1982Ca04: measured n′s, γ′s, and γn coincidences.

1998Ba80: potassium isotopes produced by bombarding 50 g/cm^2 UC^2 target with protons; mass separated In the ISOLDE magnet. Measured β^-′s (thin cylindrical plastic scin; near 4π geometry), γ′s (Ge), and $\beta^-\gamma$ coin and n′s (tof; 12 small NE102α scin for low energy; large curved plastic scin for high energy).

Others: see 1995Bu23.

Coincidences are from 1983RaZR.

^{49}Ca Levels

E(level)[†]	J^π[‡]	$T_{1/2}$	Comments
0.0	$3/2^-$	8.718 min *6*	%β^-=100 $T_{1/2}$,%β^-: from the Adopted Levels.
2023.0 *5*	$1/2^-$		
3356.8 *10*	$(9/2^+)$		
3585.0[‡] *8*	$5/2^-$		
3859.9 *9*	$(1/2^-,3/2^-)$		
4072.2 *10*	$3/2^-$		

[†] From least-squares fit to Eγ′s (evaluator), except As noted.
[‡] From the Adopted Levels.

γ(^{49}Ca)

Iγ normalization: from Σ Ti(to g.s.)=100−Σ I(n)(to g.s.).
