

^{50}Mn ε decay (1.75 min) 1972Ra14,2013Su07

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Jun Chen and Balraj Singh		NDS 157, 1 (2019)	15-Apr-2019

Parent: ^{50}Mn : $E=225.28$ 9; $J^\pi=5^+$; $T_{1/2}=1.75$ min 3; $Q(\varepsilon)=7634.48$ 7; $\% \varepsilon + \% \beta^+$ decay=100.0

^{50}Mn -E, J^π : From ^{50}Mn Adopted Levels.

^{50}Mn - $T_{1/2}$: weighted average of 1.74 min 10 (2013Su07, decay curve for γ -spectrum gated by β rays and ΔE -TOF); 1.76 min 3 (1972Ra14, decay curves for 783 γ and 1098 γ , 1 h counting period); 1.72 min 4 (1962Su10, β^+ decay curve). The same value is adopted in Adopted Levels of ^{50}Mn .

^{50}Mn - $Q(\varepsilon)$: From 2017Wa10.

1972Ra14: ^{50}Mn source was produced in $^{50}\text{Cr}(p,n)$ reaction at ORNL. Measured E_γ , I_γ with Ge(Li) detectors. Deduced levels, J, π , parent $T_{1/2}$.

2013Su07: ^{50}Mn produced in Ni(^{58}Ni ,X) reaction. ^{58}Ni primary beam at $E=68.6$ MeV/nucleon provided by the Heavy Ion Research Facility in Lanzhou (HIRFL). Target= $147 \mu\text{g}/\text{cm}^2$ Ni at the Radioactive Ion Beam Line in Lanzhou (RIBLL). Measured β -delayed protons, (proton) γ -coin, E_γ , I_γ , time-of-flight, energy loss, $T_{1/2}$ using two plastic scintillator films, a thick silicon detector, a double-sided silicon strip detector (DSSSD) and five segmented clover detectors.

1974FiZI (conference paper): measured $T_{1/2}$.

Evaluators' note: 1976Au07 and 1984Al29 assigned states at 3595, 3875, and 3898 and associated gammas observed from these states by 1972Ra14 in ($p,p'\gamma$) experiment, but not in ε,β^+ decay. The evaluators consider this decay scheme as incomplete due to large number of possible states above 3.8 MeV which could be fed.

All data are from 1972Ra14, unless otherwise stated.

 ^{50}Cr Levels

E(level) [†]	J^π [‡]
0.0	0^+
783.3 1	2^+
1881.3 2	4^+
3163.9 4	6^+
3324.6 3	4^+
3825.5 4	$(6)^+$

[†] From E_γ data. Level scheme in 2013Su07 is the same as in 1972Ra14.

[‡] From the Adopted Levels.

 ε,β^+ radiations

Coincidences shown on drawing are from 1962Su10.

E(decay)	E(level)	$I\beta^+$ [†]	$I\varepsilon$ [†]	Log ft	$I(\varepsilon+\beta^+)$ [†]	Comments

[†] Absolute intensity per 100 decays.

^{50}Mn ε decay (1.75 min) 1972Ra14,2013Su07 (continued) $\gamma(^{50}\text{Cr})$

I_γ normalization: From $I_\gamma=100$ for 783 γ . Since $J=5^+$ for ^{50}Mn , and $J^\pi=4,5,6$ for levels in ^{50}Cr above the 783 level fed in ^{50}Mn β^+ decay, the 783 γ is probably the only g.s. transition. There can be no β^+ branch to the ^{50}Cr g.s.

Coincidences shown on drawing are from 1962Su10.

E_γ [†]	I_γ ^{†b}	$E_i(\text{level})$	J_i^π	E_f	J_f^π	Mult. [‡]	δ [‡]	α [‡]	Comments
161 ^{#c}	≤ 2	3324.6	4 ⁺	3163.9	6 ⁺	[E2]		0.0674	$\alpha(\text{K})=0.0596$; $\alpha(\text{L})=0.00583$
661.5 ^{@ 3}	25 1	3825.5	(6) ⁺	3163.9	6 ⁺				$E_\gamma=661$, $I_\gamma=27$ 2 (2013Su07).
783.3 ^{@ 1}	100 2	783.3	2 ⁺	0.0	0 ⁺	E2			$E_\gamma=783$, $I_\gamma=100$ 5 (2013Su07).
1098.0 ^{@ 2}	98.5 ^{&} 23	1881.3	4 ⁺	783.3	2 ⁺	E2			$E_\gamma=1098$, $I_\gamma=97$ 5 (2013Su07).
1282.4 ^{@ 3}	33 2	3163.9	6 ⁺	1881.3	4 ⁺	E2			$E_\gamma=1282$, $I_\gamma=31$ 2 (2013Su07).
1443.3 ^{@ 2}	69 5	3324.6	4 ⁺	1881.3	4 ⁺	(M1(+E2))	-0.02 +16-52		$E_\gamma=1443$, $I_\gamma=61$ 3 (2013Su07).
^x 1793.5 ^{c 6}	0.5 1								
1944.5 5	3.8 ^a 5	3825.5	(6) ⁺	1881.3	4 ⁺				$E_\gamma=1944$, $I_\gamma=3.8$ 6 (2013Su07).
^x 2404.4 ^{c 8}	0.16 5								
2541 ^{#c}	≤ 1	3324.6	4 ⁺	783.3	2 ⁺				
3042 ^{#c}	≤ 2	3825.5	(6) ⁺	783.3	2 ⁺				E_γ : (6) ⁺ to 2 ⁺ transition is highly unlikely, γ not included in Adopted Levels, Gammas dataset. This γ may correspond to 3045 γ assigned to ^{50}Mn decay by 1994Ha43, and placed from a 3827,(0 ⁺) level.

[†] From 1972Ra14. All the gamma rays are also reported by 2013Su07.

[‡] From the Adopted Gammas.

[#] Possible but unobserved transition.

[@] Also observed by 1973Mc11 ($\Delta E_\gamma=2$ keV).

[&] From intensity balancing at the 783 state. 103 4 measured (corrected for small contribution from ^{116}In 1097 γ).

^a Corrected for small contribution from 1434.2+ γ^\pm summing.

^b Absolute intensity per 100 decays.

^c Placement of transition in the level scheme is uncertain.

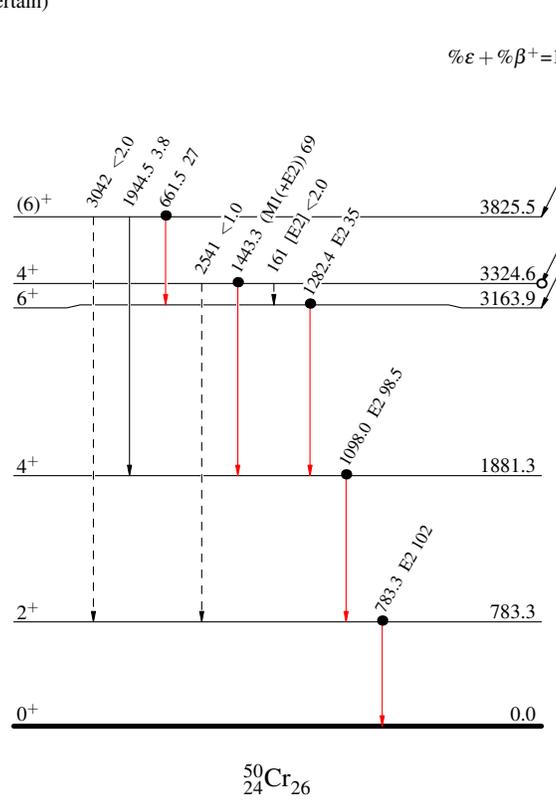

^x γ ray not placed in level scheme.
