1964Ba39: E=6 MeV, FWHM=15 keV, multi-gap heavy particle spectrograph; measured $\sigma(\theta)$; DWBA analysis.

1968De04: E=8, 10 MeV, measured $\sigma(\theta)$.

1968Wi02: reanalyzed results of 1964Ba39.

1968Gi04: E=10 MeV; measured $\sigma(\theta)$.

1972Ko41: E=10 MeV, FWHM=35-70 keV, polarized beam; measured polarization parameters, and $\sigma(E(\text{d}); E(\text{p}), \theta)$.

1963Yn01: E=21.4 MeV, E- $\Delta E/\Delta x$ telescope with NaI, measured σ , DWBA analysis.

[†] From 1964Ba39, except as noted. Values of 1964Ba39 are consistently lower than values of Adopted Levels by 7 keV for the 1160 level to 12 keV for the 3759 level. Where used in Adopted Levels (4012 level and higher), the evaluator has increased the authors values by 10 keV (4012 to 4022, 4162 to 4172,...,5214 to 5224).

[‡] From 1968Gi04.

From 1963Yn01.

@ From 1968De04.

& L=1 is not definitely excluded.

^a L=(0) for E=4998 + 5013 with $C^2S'=0.08$.

^b From comparsion of the vector analyzing power to DWBA (1972Ko41).

^c From DWBA analysis of measured $\sigma(\theta)$. Values are from 1968Wi02, except as noted.

^d From 1968Wi02, except as noted.
