Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Yang Dong, Huo Junde		NDS 128, 185 (2015)	10-Jul-2015

1985Fu10: E=65 MeV,  $\Delta E$ -E counter, energy resolution 15-22 keV FWHM, measured  $\sigma(\theta)$ .

1967Ka11: E=12 MeV, single-gap magnetic spectrograph, 6-8 keV FWHM, measured spectrum of  $\text{p}'$ .

1966Ma42: E=11,12 MeV, FWHM=8, 12 keV single-channel spectrograph, measured Q values.

1969Pe02: E=17.5 MeV, energy resolution 20 keV, surface barrier silicon detector, measured  $\sigma(\theta)$ .

1970Pr08: E=40 MeV, Ge(Li), 40 keV FWHM, measured  $\sigma(\theta)$ .

1983Dj05: E=201 MeV, overall energy resolution 60-70 keV, measured  $\sigma(\theta)$ , DWIA calculations, deduced  $1^+$  states.

See 1970Pe09 for a study of relative contributions of direct and compound nucleus mechanisms at E(p)=11 MeV for excitation of 1.44 MeV  $2^+$  state and 4.56 MeV  $3^-$  state.

Others: 1978An08, 1979AnZT, 1979KIZZ, 1980PrZV, 1980An35, 1983Og03, 1984KoZK, 1985Oz01, 1985Ko07.

All data are from 1985Fu10, except as noted.
