

$^{56}\text{Fe}(\text{d}, ^3\text{He})$  1983Pu02

| Type            | Author    | History Citation    | Literature Cutoff Date |
|-----------------|-----------|---------------------|------------------------|
| Full Evaluation | Huo Junde | NDS 109, 787 (2008) | 30-Apr-2007            |

E=80 MeV,  $\Delta E$ -E silicon surface-barrier detector telescopes particle identification method, Ge(Li) beam monitor; measured  $\sigma(E, \theta)$ ; DWBA analysis, shell-model, quasiparticle-core coupling cluster vibration model calculations; extracted S and L based on the shape of  $\sigma(\theta)$  and DWBA analyses, assumed  $J^\pi$ .

 $^{55}\text{Mn}$  Levels

S Experimental summed strengths are:

$$\Sigma \backslash S(f7/2)=3.50, \Sigma \backslash S(f5/2)=0.19,$$

$$\Sigma \backslash S(p3/2)=0.24, \Sigma \backslash S(s1/2)=0.94,$$

$$\Sigma \backslash S(d3/2)=3.19, \Sigma \backslash S(d5/2)=0.40.$$

Experimental values of  $\Sigma \backslash S(f7/2)$  and  $\Sigma \backslash S(p3/2)$  are 3.59 and 0.32 for  $0 < E(\text{level}) < 4.5$  MeV.

| E(level)             | $J^\pi$              | L       | S           | Comments  |
|----------------------|----------------------|---------|-------------|---|
| 0.0                  | $5/2^-$              | 3       | 0.11        |   |
