

$^{48}\text{Ca}(\text{B},\text{2n}\gamma)$ [1977Na12,2003Ap01,2011Se09](#)

Type	Author	Citation	History Literature Cutoff Date
Full Evaluation	Balraj Singh	ENSDF	25-Mar-2022

[1977Na12](#): $E(^{11}\text{B})=25\text{-}50$ MeV, measured $E\gamma$, $I\gamma$, $\gamma\gamma$ -coin, level lifetimes by recoil-distance method (RDM) and Doppler-shift attenuation method (DSAM) using Ge(Li) detectors.

[2003Ap01](#): $E(^{11}\text{B})=35\text{-}40$ MeV from Yale ESTU Tandem Van de Graaff accelerator. Measured $E\gamma$, $I\gamma$, $\gamma\gamma$ -coin, $\gamma(\theta)$ and $\gamma\gamma$ (lin pol) using the YRAST array consisting of 24 escape-suppressed Ge detectors, three at 160° , eight at 126° , and seven segmented Clovers at 90° , six at 50°), and three LEPS detectors, one at 90° and two at 50° . Comparison with total Routhian surface calculations and with previous predictions of subshell closures at $N=32$ and 34.

[2011Se09](#): $E(^{11}\text{B})=32$ MeV. Measured lifetimes of the first 2^+ and 4^+ states using a plunger device at Cologne in $\gamma\gamma$ -coin arrangement using Euroball cluster detector array and five Ge detectors. Comparison with large-scale shell model calculations using KB3G and GXPF1A interactions.

 ^{56}Cr Levels

$E(\text{level})^\dagger$	J^π	$T_{1/2}$	Comments
0.0 [‡]	0^+		
1006.65 [‡] 20	2^+	3.81 ps 10	$T_{1/2}$: measured mean lifetime $\tau=5.49$ ps 14 (2011Se09).
1831.6 4	2^+		
2076.6 [‡] 3	4^+	2.18 ps 8	$T_{1/2}$: measured mean lifetime $\tau=3.15$ ps 11 (2011Se09). Other: mean lifetime $\tau \leq 3.4$ ps 6 or < 4 ps ($T_{1/2} < 2.8$ ps) (1977Na12), without applying feeding correction from higher level(s).
2281.7 8	(3)		
2681.7 11	4^+		$E(\text{level}), J^\pi$: level from 1977Na12 . $T_{1/2}$: ≥ 0.7 ps (1977Na12), probably from DSAM.
3251.8 [‡] 6	6^+		$J=[6]$ in 1977Na12 . $T_{1/2}$: ≥ 0.7 ps (1977Na12), probably from DSAM.
3860.8 8	(6)		$E(\text{level})$: due to reversed ordering of the $587.6\gamma - 607.8\gamma$ cascade in the Adopted dataset, this level corresponds to 3841.2 level in the Adopted Levels.
4448.5 [#] 6	7		$J=[\geq 7]$ in 1977Na12 . $T_{1/2}$: ≥ 0.7 ps (1977Na12), probably from DSAM.
4753.2 [‡] 9	8^+		
5602.1 [#] 8	9		$J=[\geq 8]$ in 1977Na12 .
6884.9 13	(10)		
7057.6 [#] 10	11		
8767.7 [#] 12	13		

[†] From least-squares fit to $E\gamma$ values.

[‡] Band(A): g.s. band.

[#] Band(B): Band based on $J=7$.

 $\gamma(^{56}\text{Cr})$

A_2 , A_4 and POL values are from [2003Ap01](#).

1710.0 7	19.6 5	8767.7	13	7057.6	11	Q	$A_2=+0.24$ 8; $A_4=-0.31$ 8

[†] Weighted average of values from 2003Ap01 and 1977Na12, when values are available from the latter reference, otherwise from 2003Ap01. Exception for 1500.1 γ is noted.

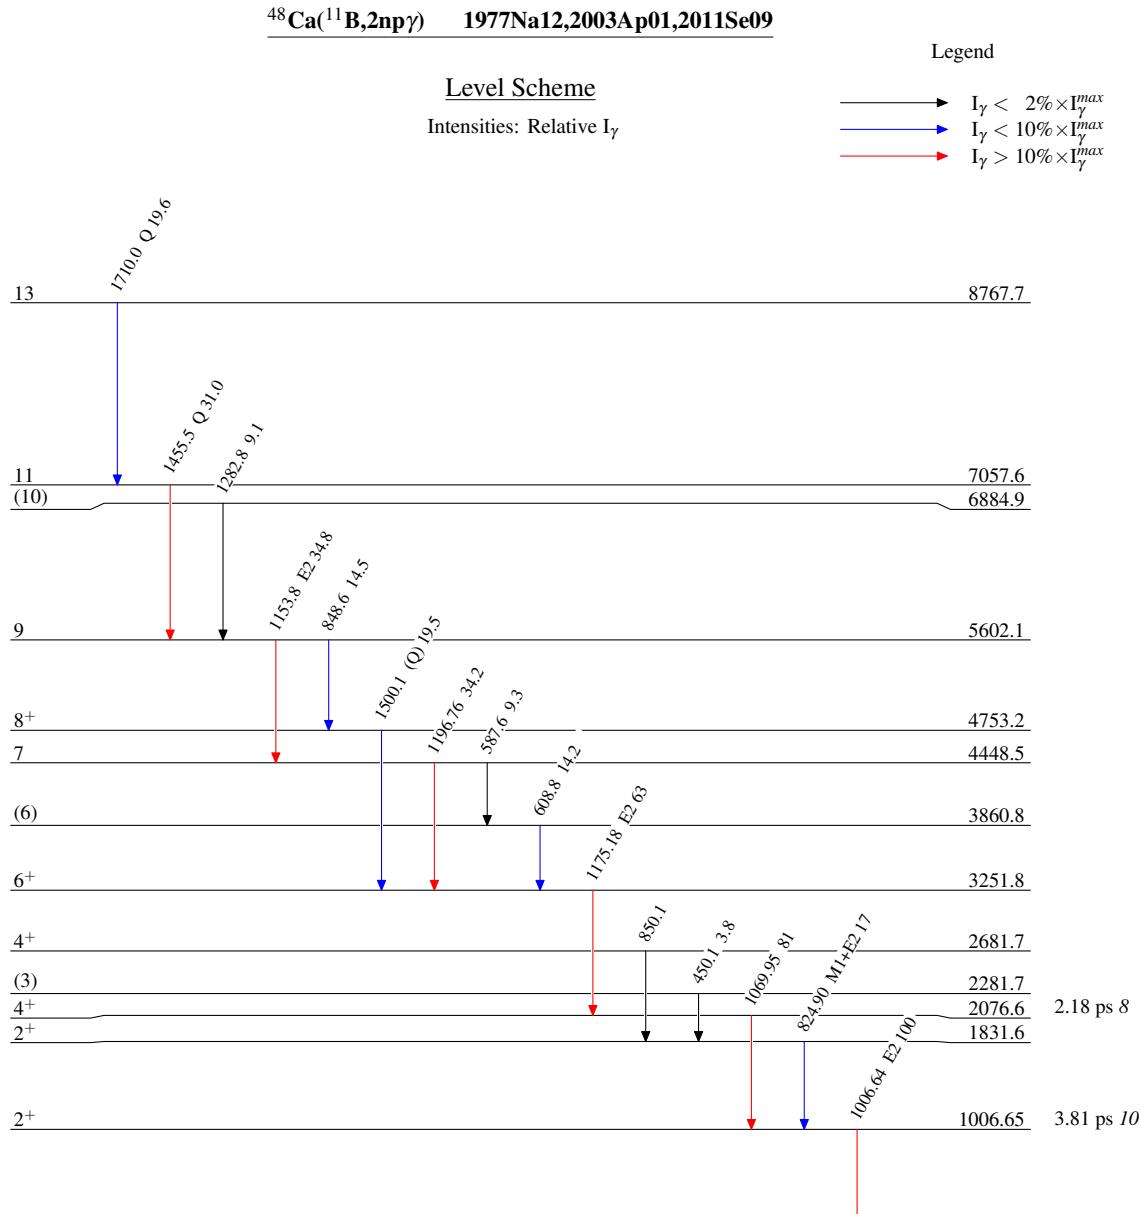

[‡] Ordering of the 587.6 γ – 607.8 γ cascade reversed in $^{238}\text{U}(^{48}\text{Ca},\text{X}\gamma)$ (2006Zh42), also given in the Adopted dataset.

[#] Uncertainty of 0.6-1.0% in 2003Ap01 appears unrealistically low.

@ From 2003Ap01. Values from 1977Na12 are listed under comments.

& Assigned by evaluator based on $\gamma(\theta)$ and $\gamma(\text{pol})$ data in 2003Ap01.

^x γ ray not placed in level scheme.
