4525.7 ^a 3	(17/2 ⁺)	0.38 ps 14	J^π : (17/2 ⁺) from stretched-quadrupole radiation pattern.
6187.3 ^a 4	(21/2 ⁺)	<0.14 ps	J^π : (21/2 ⁺) from stretched-quadrupole radiation pattern.
8323.2 ^a 5	(25/2 ⁺)	<0.14 ps	J^π : (25/2 ⁺) from stretched-quadrupole radiation pattern.

[†] Calculated using least-squares adjustment procedures. Energies of the first three excited states were held fixed in the calculation.[‡] From Adopted Levels; supporting arguments from this data set based on $T_{1/2}$ and $\gamma(\theta)$ and $(\alpha, n\gamma)$ data of 1972Sa38 are indicated.[#] From DSAM, except as noted.[@] From Adopted Levels.[&] From RDM.^a Band(A): $\Delta J=2$ positive-parity band. See 1978Na06 for comparison to ^{56}Fe ground-state band. $\gamma(^{57}\text{Fe})$ $\gamma\gamma$ -coincidences were measured but not given.

[†] Photon branching ratio (in percent) from each level. See 1978Na06 for relative I_γ .

[‡] From adopted gammas.

[#] Includes contribution from unknown contaminant; observed clearly in $\gamma\gamma$ -coincidences only.

[@] Observed in $\gamma\gamma$ -coincidences only.

[&] Disagrees with results from $(\alpha, p n \gamma)$ and $(\alpha, n \gamma)$.

^x γ ray not placed in level scheme.

$^{48}\text{Ca}(^{13}\text{C},4n\gamma) E=25-65 \text{ MeV} \quad 1978\text{Na06}$
