

⁶²Ni(p,nγ),⁶¹Ni(d,nγ) 1973BI07,1984Ch25

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Alan L. Nichols, Balraj Singh, Jagdish K. Tuli		NDS 113, 973 (2012)	15-Apr-2012

1970Da15: E(p)=4.7-5.9 MeV, γγ(θ), γ(θ) comparison with predictions of the compound-nucleus statistical model.
 1972BaUS: E(p)=6.0 MeV, measured Eγ, Iγ in singles mode.
 1973BI07: E(p)=5.8 MeV, ED=6.5 MeV, pulsed beam, delayed coincidences, g factor measurement by time differential perturbed angular distribution technique.
 1974Ca14: E(p)=5.32-5.51 MeV, T_{1/2} by DSAM.
 1975SeZF: E(p)=6.0 MeV, measured Eγ, Iγ in singles mode.
 1977Ch04: E(p)=5.48-7.20 MeV, results agree with those by same authors from ⁵⁹Co(α,nγ); see relevant data section for their results.
 1984Ch25: E(p)=5.5-7.3 MeV, Eγ, γ(θ), γγ coin.
 Decay scheme is that suggested by 1973BI07 and 1984Ch25.
 Spin hypotheses and δ from 1984Ch25 are given in comments, as obtained from comparison of γ(θ) with theoretical predictions of compound nucleus statistical model through a least-squares fitting procedure.

⁶²Cu Levels

E(level) [†]	J ^π [‡]	T _{1/2}	Comments
0	1 ⁺		
40.86 4	2 ⁺	4.6 [@] ns 4	g=+0.661 12 (1973BI07)
243.43 8	2 ⁺		
287.90 10	2 ⁺		
390.18 9	4 ⁺	11.1 [@] ns 2	g=+0.667 40 (1973BI07) J ^π : assignment of 3 ⁺ quoted by 1970Da15 from ⁶⁰ Ni(α,pnγ) data of 1969SuZT is not supported by γγ(θ) of 1973BI07, which suggests J=4 ⁺ . Data on ⁶⁴ Zn(d,α) give L=4 for this level (1973Da28), allowing J ^π =(3,4,5) ⁺ . Measurements by 1976Ch17 from ⁶⁰ Ni(α,pnγ) and other reactions indicate J=4 ⁺ .
