 $^{62}\text{Zn}$  Levels

E(level)	L	S <sup>†</sup>	Comments
0	0	1.0	S: absolute S=0.210, assuming the spectroscopic factor for the $\alpha$ +triton configuration of $^7\text{Li}$ is unity. S value is extremely sensitive to the choice of $\alpha$ +target bound-state parameters used in the DWBA calculation. See <a href="#">1988Ra28</a> for analysis of these and other other data using different geometrical parameters.
