S(n)=16280 SY; S(p)=1720 SY    [2012Wa38](#)DSN=670 SY, DSP=310 SY FROM [2012WA38](#).

[2002Bi17](#),[2002Lo13](#): Observed in fragmentation of  $^{78}\text{Kr}^{34+}$  beam, E=78 MeV/A with C and Be targets Ions selected by LISE3 separator and implanted in a Si telescope where the decay was observed. Measured  $T_{1/2}$  from time difference between the ion implant and the subsequent decay in the same pixel of the Si strip detector.

Observed in  $^9\text{Be}(^{78}\text{Kr},X)$ , E=140 MeV/A ([2005St34](#)), measured production cross section= $1.1 \times 10^{-9}$  5, compared with theory ([2005St29](#)).

Calculated S(2p)=-3.54 33 ([2008Sc02](#)) (Theory).[66Se Levels](#)[Cross Reference \(XREF\) Flags](#)[A](#)     $^9\text{Be}(^{68}\text{Se},2n\gamma)$
