1989Ja09: $E(^6\text{Li})=44$ MeV provided by Orsay tandem MP Van de Graaff. 96.2% enriched ^{70}Ge target. A split-pole magnetic spectrometer used. Measured $\sigma(\theta)$, DWBA and coupled channel analysis.

2005Ba13: $E(^6\text{Li})=28$ MeV provided by Sau Paulo Pelletron accelerator. self-supported $30\mu\text{g}/\text{cm}^2$ ^{70}Ge target. A split-pole magnetic spectrometer used. Elastically scattered ^6Li were monitored by a surface barrier detector. Measured angular distributions of scattered ^6Li , $\sigma(\theta)$, DWBA and coupled channel analysis.
