

⁴⁰Ca(³⁶Ar, α 2p γ), ⁵⁸Ni(¹⁴N,pn γ) 1986He17,1989My01,2008Lj01

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	G. Gürdal, E. A. Mccutchan		NDS 136, 1 (2016)	1-Jul-2016

- 1986He17:** ⁵⁸Ni(¹⁴N,pn) with E(¹⁴N)=39 MeV. Beam was provided by FN tandem accelerator at Universitat Koln. A 67.8% enriched 0.9 $\mu\text{g}/\text{cm}^2$ Ni target. 20 μm thick Ta stopper. γ -rays were measured using 3 Ge detectors. Neutrons were detected using a circular 4-segment NE213 detector. Measured $E\gamma$, $I\gamma$, γn coin, $T_{1/2}$ by recoil-distance Doppler shift method.
- 40Ca(²⁰Ar, α 2p γ)** with E(⁴⁰Ar)=115 MeV. Beam was provided by VICKSI accelerator at Berlin. A 350 $\mu\text{g}/\text{cm}^2$ Ca target with 96.9% ⁴⁰Ca on a thin 0.8 μm Al foil was used. 20 μm thick Ta foil used as a stopper. γ -rays were measured using three Ge(Li) detectors. Measured: $E\gamma$, $I\gamma$ and $T_{1/2}$ by recoil-distance Doppler shift method. Authors adopted average $T_{1/2}$ from two experiments.
- 1989My01:** ⁴⁰Ca(³⁶Ar, α 2p) with E(³⁶Ar)=145 MeV. Beam was provided by VICKSI accelerator at Berlin. A 99.96% enriched 1 mg/cm² Ca target on a thin 50 mg/cm² Bi was used. γ -rays were measured using ORIS spectrometer which consisted of 12 BGO shielded Ge(Li) detectors. Measured: $E\gamma$, $I\gamma$, $\gamma\gamma$ coin, DCO ratios (not given in the publication). Other: [1988MyZZ](#).
- 2008Lj01:** ⁴⁰Ca(³⁶Ar, α 2p) with E(³⁶Ar) =136 MeV. Beam was provided by accelerator at Legnaro. 0.5 mg/cm² enriched ⁴⁰Ca target on a 2.0 mg/cm² gold foil was used. 10 mg/cm² thick gold stopper. γ -rays were measured using GASP array of 38 Ge detectors. Cologne plunger was used to measure level lifetimes. Events with at least two prompt γ -rays detected in coincidence were recorded. Measured $E\gamma$ and $T_{1/2}$ using recoil-distance Doppler shift method.
- 2003LiZW:** ⁴⁰Ca(³⁶Ar, α 2p), E(³⁶Ar) =104 MeV. ATLAS facility at ANL. Gammasphere and FMA were used. Measured $E\gamma$.
