

<sup>40</sup>Ca(<sup>40</sup>Ca,2αpγ) 2005Fi10

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Balraj Singh and Jun Chen		NDS 188,1 (2023)	17-Jan-2023

**2005Fi10:** E(<sup>40</sup>Ca)=160 MeV. Measured Eγ, Iγ, γγ-coin, gated γ(θ) using Gammasphere and Microball arrays at ATLAS-ANL facility. Deduced levels, J, π, Band structures, γ-ray multipolarities, mixing ratios. Details of γ(θ) data are not available.

**2005Fi10** also discuss <sup>71</sup>Kr to <sup>71</sup>Br decay and support 5/2<sup>-</sup> for the ground state of <sup>71</sup>Kr parent, as expected for the mirror partner.

<sup>†</sup> From a least-squares fit to Eγ data.

<sup>‡</sup> As proposed in **2005Fi10** based on their γ(θ) data, band structures, decay patterns, and systematics of neighboring nuclides. The assignments in Adopted Levels are the same, except that all have been given in parentheses, due to the absence of strong supporting arguments for low-lying levels and bandheads.

# Band(A): π5/2[312]. Configuration contains small admixtures from 5/2 members of other rotational bands.

@ Band(B): π3/2[312], α=+1/2.

& Band(b): π3/2[312], α=-1/2.

<sup>a</sup> Band(C): π5/2[422], α=+1/2.

<sup>b</sup> Band(c): π5/2[422], α=-1/2.

<sup>c</sup> Band(D): Band based on 9/2<sup>+</sup>. Probable oblate structure.

<sup>d</sup> Band(E): Band based on 5/2<sup>-</sup>.

<sup>e</sup> Band(F): Band based on 25/2<sup>+</sup>.

<sup>f</sup> Band(G): Band based on 13/2<sup>+</sup>.

<sup>g</sup> Seq.(H): γ cascade.

<sup>†</sup> Uncertainties given in **2005Fi10** are statistical only and the evaluators have added an additional 2% uncertainty in quadrature to account for systematic uncertainty typically seen in other work with the Gammasphere.

<sup>‡</sup> 12.3 2 listed in table I of **2005Fi10** for each γ seems to be combined intensity for the double placement of 222.4γ, although no comment is made about the intensity by **2005Fi10**.

<sup>#</sup> 88.4 6 listed in table I of **2005Fi10** for each γ seems to be combined intensity for the doublet 1081.6 and 1082.4, although no comment is made about the intensity by **2005Fi10**.

<sup>@</sup> From gated γ(θ) measurements of **2005Fi10**, but no angular distribution coefficients are listed in the paper.

<sup>&</sup> The γ(θ) distribution shown in figure 4 of **2005Fi10**.

<sup>a</sup> E2 assigned by **2005Fi10**, but coefficients of γ(θ) data are not listed by the authors.

<sup>b</sup> E1 assigned by **2005Fi10**, but coefficients of γ(θ) data are not listed by the authors.

<sup>c</sup> **2005Fi10** give M1+E2, the evaluators assign (D(+Q)) since listed mixing ratio overlaps zero and no angular distribution coefficients are listed in **2005Fi10**, except that for six transitions γ(θ) distributions are shown in Fig. 4 in paper.

<sup>d</sup> Multiply placed with undivided intensity.

<sup>e</sup> Placement of transition in the level scheme is uncertain.
