Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Balraj Singh and Jun Chen		NDS 158, 1 (2019)	16-May-2019

**2010St05:** E( ${}^{40}\text{Ca}$ )=185 MeV. Measured E $\gamma$ , I $\gamma$ ,  $\gamma\gamma$ -coin, (particle) $\gamma$  coin,  $\gamma\gamma(\theta)$ (DCO) using EUROBALL spectrometer consisting of composite cluster and clover detectors. Charged particles were detected using the Italian Silicon Sphere containing 40 silicon  $\Delta\text{E}$ -E telescope detectors. The neutrons were detected with neutron wall NWALL consisting of 50 liquid scintillators. Experiments conducted at XTU tandem accelerator at Legnaro. Comparison with predictions of configuration dependent Cranked Nilsson-Strutinsky calculations.

<sup>†</sup> From least-squares fit to  $E\gamma$  data, assuming uncertainty of 1 keV for each  $\gamma$  ray.

<sup>‡</sup> From 2010St05 based on  $\gamma\gamma(\theta)$ (DCO) data for selected transitions, interconnecting dipole and quadrupole transitions, and band assignments.

<sup>#</sup> Band(A): Band based on  $3/2^-, \alpha=-1/2$ . Proposed configuration= $\nu 3/2[312]$  at low spins, at higher spins this band is crossed by  $\pi g_{9/2}^3 \otimes \nu g_{9/2}^3$  configuration.

<sup>@</sup> Band(a): Band based on  $5/2^-, \alpha=+1/2$ . Proposed configuration= $\nu 3/2[312]$  at low spins, at higher spins this band is crossed by  $\pi g_{9/2}^3 \otimes \nu g_{9/2}^3$  configuration.

<sup>&</sup> Band(B): Band based on  $9/2^+, \alpha=+1/2$ . Proposed configuration= $\pi g_{9/2}^2 \otimes \nu g_{9/2}^3$ . This band does not show a strong decrease in quadrupole collective behavior.

<sup>a</sup> Band(b): Band based on  $(7/2^+), \alpha=-1/2$ . Proposed configuration= $\pi g_{9/2}^2 \otimes \nu g_{9/2}^3$ .

<sup>b</sup> Band(C): Side band.

 $\gamma({}^{73}\text{Kr})$ 

DCO ratios for  $\Delta J=1$  and  $\Delta J=2$  transitions are shown by 2010St05 in their Fig. 3.
